

VIRTUAL RESEARCH IN ACTION

The hard-hitting truth is that deaths from both synthetic and non-synthetic cannabinoid use have increased 6,100%, and 3,600% in Florida since 2014, respectively. Accidents account for nearly 98% of deaths in synthetic cannabinoids and 100% in cannabinoids.

Join Armiel Suriaga as he explains the Cannabinoid Harm Reduction Education Dissemination an initiative aimed at:

- Reducing avoidable cannabinoid-related deaths
- Raising public awareness about the dangers of synthetic cannabinoids.
- Enhancing clinical skills of nursing students to identify at-risk populations, signs, symptoms and treatment

Tips to Nip Cannabinoid-Related Deaths in the Bud

Presented by Armiel Suriaga, Ph.D.,
Assistant Professor, Christine E.
Lynn College of Nursing

1 – 2 p.m. EST
Thursday, Sept. 30
