i>clicker at Florida Atlantic University

**BASE UPDATES:** Your white base will not have to be swapped again. From now on, you can update it by simply downloading the **i>clicker Base Firmware Updater** here: [http://www.iclicker.com/support/downloads/](http://www.iclicker.com/support/downloads/)

**SOFTWARE UPDATES:** Once you have version 6 software and above (it will need to be downloaded, by hand, the first time from the link above) you can easily check for software updates by double-clicking on the ⏩ WebUpdate.exe icon in your i>clicker win or mac folder (best practice is to run the webupate at the beginning of each semester).

**BLACKBOARD WIZARD:** This is the ONE-CLICK integration with Blackboard. It eliminates student registration errors by allowing them to register directly in their Blackboard account (rather than on www.iclicker.com). It makes downloading roster/uploading grades MUCH easier with only one click of a button, rather than multiple steps. You can get access to it here: [http://www.fau.edu/oit/instructional/iclickers.php](http://www.fau.edu/oit/instructional/iclickers.php)

**FAU/ I>CLICKER INFORMATION:** [http://www.fau.edu/oit/instructional/iclickers.php](http://www.fau.edu/oit/instructional/iclickers.php)

**TRAINING:** Online webinars are offered weekly for training: [http://www.iclicker.com/support/training/](http://www.iclicker.com/support/training/)

**I>CLICKER TECH SUPPORT:** support@iclicker.com 866-209-5698

**WHICH PRODUCT SHOULD I CHOOSE?**  
(Note that i>clicker2 can be used in ANY classroom, while i>clicker+ can only be used in classrooms that are limited to asking multiple choice questions. So if you required i>clicker+, your students may have to then purchase an i>clicker2 for another class.)

<table>
<thead>
<tr>
<th>Product</th>
<th>Description</th>
</tr>
</thead>
</table>
| i>clicker+ | • Same old i>clicker, same price, but a new look (with less plastic and 2 batteries)  
*Spring 2013 release date* |
| i>clicker2 | • LCD display so students can see and confirm what they voted  
• full numeric and alphanumeric functionality (ask open-ended questions)  
• self-paced polling (students can answer up to 99 questions at a time, at their own pace)  
• no “hidden” third battery: only 2 AAA batteries  
• instructor’s remote has a laser pointer (and still runs power point and i>clicker)  
*This remote keeps its simplicity with the multiple choice buttons still being the focal point.* |
| i>clicker GO | • allows students to use their laptop, tablet, or smartphone to vote  
• instead of purchasing a device, students pay a subscription fee ($10 per semester)  
*NOTE: As with all web devices, you must have a solid wifi connection in the classroom – enough to support the number of students using i>clickerGO.* |

*Note that all remotes above will work together in the same classroom at the same time.
