1. The UFS meeting was called to order by William McDaniel, President, at 2:00 p.m. in Engineering East 106 on the Boca Raton Campus and videoconference at the Davie Campus, the Fort Lauderdale Campus, the SeaTech Campus, the Harbor Branch Campus, and the Port St. Lucie Campus.

Members Present: William McDaniel, Provost Brenda Claiborne, Bruce Arneklev, Michelle Hawkins, Rosalyn Carter, Kanybek Nurtegin, Eric Shaw, Allen Smith, Bill Bosshardt, John Bernandin, Jim Han, John Valentine, Ernest Brewer, Valerie Bryan, Dilys Schoorman, Susannah Brown, Mike Harris, Brian McConnell, Chris Beetle, Fred Hoffman, Tom Monson, Markus Schmidmeier, Jerry Haky, Morton Levitt, Schmidt-Kostner, Susan Dyess, Bernadette Lange, Ken Frankel, Teresa Van Dyke, Tim Lenz, Ron Nyhan

Guests Present: Diane Alperin, Ed Pratt, Karen Hooke, Tracy Boulukos, Lydia Smiley, Robert Seltzer, Jason Ball, Christina Mancini, Rachael Boba-Santos, Shirley Gordon, David Neuman, James Cavenech, Barry Linger, Harry DeMik, David Herst, Sika Dagbone’, Derrick White, Andre Turner, Janet Kramer

2. The UFS meeting minutes from March 2012 were approved as amended.

3. President’s Report: details upon request
   a) Average class size in SUS: A report in Orlando Sentinel, March 20, 2012: Average class size among a national sample of universities ~ 18.8. For SUS, 24.25. For FAU 21, for UCF 31 and USF 28
   b) Programs terminated through Provost’s office: BA in Music Business (replaced with BM in Commercial Music in 2004). The BS in Human Resources (admission has been suspended for 5 years; students can pursue degree in Business Administration and Management; one student left – to graduate May 2012). The MA in German (no current students; students interested in German literature can pursue MA in Comparative Literature). The MA in Liberal Studies (no current students; admission suspended Spring 2010; college has graduate programs in a number of areas students can pursue
   c) New sign-in method for remote campuses: via e-mail to Administrative Assistant
   d) Steering members, based on reports from the field, had a frank discussion with the Provost about many issues that are arising from new policies in both Summer and Fall schedules. There were examples of hardships to both students and. There was discussion as to whether some of the new policies are misinterpreted, misstated or not new policies at all.
4. UPC Consent Agenda

   Accepted without objection

5. UPC Action Items
   a) Revisions to the Academic Petitions Process
      Approved by majority vote
   b) Information item: Signature approval process retention
   c) Revised structure for the University Honors Council [amended to include
      QEP Director on Council]
      Approved by majority vote
   d) New honors-in-the-major programs: Lenz reported that the Academic
      Planning & Budget Committee found minimal cost impact from the proposed actions.
      New honors programs in English, Political Science, Accounting, Exceptional Student
      Education. Minor changes in Engineering Innovation Leadership.
      Approved by majority vote
   e) Counting Business major courses toward a minor
      Approved by majority vote
   f) New Healthcare Information Systems Minor
      Approved by majority vote
   g) Business Intelligence [new name] Minor and Certificate name change
      Approved by majority vote
   h) Criminal Justice and Criminology Minor revisions
      Approved by majority vote
   i) Revisions to the Engineering Pre-Professional Program
      Approved by majority vote
   j) Registered Nurse to B.S. Nursing changes
      Approved by majority vote

6. GPC Consent Agenda

   Approved without objection

7. GPC Action Item
   a) Changes to Curriculum- MFA in Visual Arts: Ceramics, Drawing, Graphic
      Design, Painting, Photography, Printmaking, Sculpture, Book Arts
      Approved by majority vote
   b) GNP Master’s Program Track - Terminate
      Approved by majority vote
   c) ANP/GNP Track Addition: This replaces the items in (b) and (d)
      Approved by majority vote
   d) ANP Master’s Program Track- Terminate
      Approved by majority vote
e) Proposal for Revisions to Master of Science in Criminology and Criminal Justice
   **Approved by majority vote**

f) Structural changes to MD Curriculum
   **Approved by majority vote**

g) Catalogue Revisions for Mechanical Engineering Program
   **Approved by majority vote**

h) Proposal for BS in Bioengineering students to extend into an MS in Bioengineering
   **Approved by majority vote**

8. Business Items:
   a) First Day Attendance policy: Tracy Boulukos, Financial Aid, described the problem of certifying “attended at least once” by students having Federal grants. The problem causes a large financial obligation for FAU. Steering recommended a Mandatory First Day Attendance policy. Boulukos and the Registrar will establish a task force including faculty representation to work out the details of establishing and enforcing the new policy. The Senate approved the policy by majority vote.

b) 2012-2013 Senate/Steering calendar: President McDaniel, for information, displayed the calendar as created by APBC and adopted by Steering.

c) Committee on Committee’s report on election results for 2012-13:
   i) President Elect: Ronald Nyhan
   ii) Steering Committee: Morton Levitt, Marguerite Purnel, Michelle Hawkins
   iii) Committee on Committees: Gary Parsons, Bonnie DiGiallonardo, Bill Bosshardt, Mike Harris, Brewer, Val Bryan.
   iv) Academic Planning and Budget Committee: Chris Beetle, Kevin Lanning, Fred Hoffman, Val Bryan. Bryan withdrew upon learning of her election to Committee

9. Guest Speaker: none

    Susan Reilly reported that the first bargaining session was held on April 13. The representatives of the BOT and UFF decided on the articles in the Collective Bargaining Agreement that would not be opened this year. The sides will meet to negotiate the opened articles throughout the summer.

11. Open Forum with the Provost
    The Provost addressed questions from the Senate regarding the proper communication of administrative decisions and presented a brief financial summary highlighting the operating expenses as rationale for administrative decisions regarding budget cut decisions.
12. Comments by President M. J. Saunders
   None

13. Good of the Senate:
   Ronald Nyhan reported that, in response to concerns raised by the College of Education in March’s Good of the Senate, the Dean of the Graduate College had stated that students who wish to graduate in Fall 2012 should submit their Plan of Study for approval before May 4th because many faculty who would sign the POS may not be available during the summer, however, the Graduate College would accept POS during the summer for those graduate students graduating in Fall 2012. Further, there is a new policy being drafted regarding Graduate Assistantship tuition waivers. Dr. Rosson agreed that current GAs would not be affected (grandfathered in) and that any policy would be thoroughly discussed with faculty before implementation.

   President McDaniel and the Provost commented on and fielded questions about the proposals for meeting the looming budget cuts.

   The meeting was adjourned at 4:00 pm.

Items 5: All the below are Senate approved except for the information item in (b)

University Undergraduate Programs Committee (UUPC) Report of Action Items
Approved at the Meeting of March 23, 2012

1. Revisions to the Academic Petitions Process [Item 5(a) on Senate Agenda]
Undergraduate Studies Dean Edward Pratt is proposing revisions to the Academic Petitions Process that include restricting the time limit for academic withdrawals to one year and cleaning up current illogical procedures such as requiring undeclared majors to file petitions with their college, among other measures delineated in the revised catalog language below. The UUPC approved the changes.

Petitions

Academic Petitions Process
Students are expected to be familiar with and to conform to the regulations of the University. An academic petition may be filed when a particular academic requirement or regulation causes undue hardship for the student. Please note that this process does not concern itself with grade reviews (see University Regulations, Chapter 4, Regulation 4.002, Student Academic Grievance Procedures for Grade Reviews at www.fau.edu/regulations) nor does it act on any financial matters, including refunds for dropped classes or withdrawals (see Fee Petitions and Other Petitions below).

Degree-seeking undergraduate students with declared majors submit their petitions to their college’s student services office. Degree-seeking students with undeclared majors submit their petitions to Freshman Academic Advising Services.

Non-degree-seeking students should direct their petitions to the college, department or program to which their request applies.

A non-degree-seeking student wishing to withdraw from two or more course(s) must submit a separate petition for each course.

The procedures to file an academic petition are as follows:
1. Petitioner must fill out an Undergraduate Petition form. The form may be picked up at the college’s student services office or at Freshman Academic Advising Services. The petitioner must attach any pertinent information in support of the petition (i.e., medical reports, records, verifying letters, memos from instructors, etc.).

Note: No petition will be considered without the appropriate documentation. Students should consult their college’s student services office or Freshman Academic Advising Services for advice on the type of documentation needed.
2. A typewritten statement describing the extenuating circumstances of the petitioner’s request must be submitted with the Undergraduate Petition form.

3. Petitioner must return, signed and dated, the original page of the completed petition form to the college’s student services office or Freshman Academic Advising Services, whichever applies.

The decision of the college or Freshman Academic Advising Services will be communicated to the petitioner in writing by mail or by email. No petitions will be accepted after the student has graduated.

Petitions related to academic withdrawals will not be accepted after one academic year from the end of the semester in which the course was taken.

**Academic Appeals**
Appeals of petition decisions should be directed to the college dean or, in the case of decisions made by Freshman Academic Advising Services, to the Dean of Undergraduate Studies. The decision of the dean (or dean’s designee) constitutes final university action.

**Fee Petitions**
Contact the Controller’s Office if the petition relates to refunds, waivers or withdrawal from courses for other than exceptional circumstances.

**Other Petitions**
Withdrawal for exceptional circumstances is a type of petition for which the Office of Student Affairs is responsible. This type of petition is discussed in detail in two sections of the University Catalog: the Academic Policies and Regulations section and in the Tuition, Fees and Refunds section.

2. **Signature approval process retention**
The UUPC passed a motion in support of retaining the existing signature approval process for program/course proposals and changes, noting that the governance process is meant to be faculty controlled and that the administration, represented by the President, has veto power once proposals have been vetted by the faculty. The committee is concerned that requiring administrative approval before proposals have been considered at the faculty level would also violate University Faculty Senate (UFS) laws and feels as well that the UFS should vote on any changes to the signature approval process.

3. **Revised structure for the University Honors Council (UHC)**
Honors Dean Jeffrey Buller is proposing reorganizing the University Honors Council in order to implement the recommendations of the Honors Education Taskforce. Changes include expanding the council in size to include more representation, requiring that the chair be a voting member, and mandating monthly (rather than as-needed) meetings, among other modifications detailed below. The UUPC approved the changes.
**Purpose**
The Florida Atlantic University Honors Council (UHC) will function in two capacities.

1. As a subcommittee of the University Undergraduate Program Committee, the UHC will advise the UUPC on *curricular matters related to honors education* at Florida Atlantic University, including whether:
   a. Courses proposed for honors credit meet appropriate institutional standards.
   b. Newly proposed upper-division honors programs meet the criteria established for such programs.

2. As a council within the Division of Academic Affairs, the UHC will:
   a. Promote the development of additional upper-division honors programs.
   b. Oversee the implementation of recommendations arising out of the August 18, 2011 report of the Honors Education Taskforce.
   c. Encourage cooperation and the exchange of ideas among all honors pathways at Florida Atlantic University.

**Membership**

1. The Florida Atlantic University Honors Council will have eleven voting members, all chosen according to the appropriate policies in their colleges:
   a. Two members each from colleges with traditionally high involvement in honors education at both the lower and upper divisions:
      i. The Wilkes Honors College
      ii. The Schmidt College of Arts and Letters.
      iii. The Schmidt College of Science
   b. One member each from other colleges that participate significantly in undergraduate education:
      i. The College of Business
      ii. The College for Design and Social Inquiry
      iii. The College of Education
      iv. The College of Engineering and Computer Science
      v. The Lynn College of Nursing

The Graduate College and the Schmidt College of Medicine are not represented on the University Honors Council since this body deals exclusively with the undergraduate curriculum.

2. The Dean of the Wilkes Honors College, the Dean of Undergraduate Studies, the Coordinator of the University Honors Program, and the Director of the QEP (for as long as the University’s QEP topic deals extensively with either undergraduate research or honors education) will be *ex officio*, non-voting members of the UHC.
3. The presence of six of the Council’s eleven voting members will be considered a quorum for the purposes of conducting business.
4. It is strongly recommended that individuals elected to membership on the University Honors Council by their colleges have experience in honors education at the faculty or administrative level either at Florida Atlantic University or at another institution.

**Operation**
1. The chair of the University Honors Council will be elected from among the eleven voting members.
2. The University Honors Council will have one regular meeting per month from September through April.
3. Additional meetings may be called by the chair of the UHC or by one of the *ex officio* members.

4. **New honors-in-the-major programs** [Item 5(d) on Senate Agenda]
   In line with the University goal of implementing additional honors opportunities, five departments are proposing new honors-in-the-major programs: *English, Political Science, Accounting* (in the form of a revamped Accounting Scholars program), *Exceptional Student Education* and *Geography*. All received approval at the departmental and college levels, as well as from the University Honors Council, after meeting four criteria: set entrance requirements, standards for continuation in the program, honors enrichment elements (i.e. honors compact) and a required capstone project. A document containing proposals for each program is attached. **The UUPC approved the five new programs.**

5. **Counting Business major courses toward a minor** [Item 5(e) on Senate Agenda]
   The College of Business is proposing allowing a maximum of 3 credits be double counted between a major and a minor, a policy change designed to encourage students to pursue minors without overburdening them. All majors and minors would still require the same number of credits, but under the new policy, 3 of those credits could apply to both programs. Explanatory memo included below. **The UUPC approved the policy change.**

   **Proposal for Counting Courses Already Taken for a Major Toward a Minor**

   The dean’s office proposes allowing double counting of courses between majors and minors. This will potentially speed graduation for business students who desire a business minor and will promote more business students taking minors within the college.

   The language change proposed below would affect the current wording of most minors in the catalog in the areas of: Accounting, Economics, Finance, Real Estate, Management Information Systems, Operations Management, Marketing, Hospitality, Entrepreneurship.
**Change from:** Courses used for the XXX minor may not count toward other business major or College core requirements.

**Change to:** A maximum of 3 credits used for the XXX minor may count toward other business major requirements. A minimum of two courses (6 credits) must be exclusive to the minor.

**Rationale:**

Minors in the COB require at least one 3-credit college core course and then an additional 9 credits. This change would potentially allow students in a major that has courses related to a minor area to take only 6 additional credits (two additional courses) in order to fulfill requirements for a minor. This does not undercut the requirement for 12 credits toward the minor but rather allows students a creative alternative to have credits already earned toward a major to apply to a minor. This aligns with the UUPC guidelines that “Minors for specific student groups may have lower requirements if the student is presumed to have already completed work related to the minor. The total body of work for these minors should meet the minimum standards.” Currently, students can apply credits earned toward a minor to their majors through petitioning to the Department chair and the petitions usually get approved.

The change in the language will benefit both departments and students. The departments will be encouraged in creating cross-disciplinary minors and work in collaboration with other departments. Students will have the access and the opportunity to pursue multidisciplinary studies and expand their skills beyond their majors, in alignment with the industry needs.

6. **New Healthcare Information Systems Minor** Item 5(f) on Senate Agenda

The College of Business is proposing a 12-credit Healthcare Information Systems (HIS) minor that would be offered jointly by the Department of Information Technology and Operations Management and the Health Administration program. The intent is to answer a demand for HIS professionals. The program would require adding courses to the inventory (ISM 4041, ISM 4381, see Consent Agenda), but existing courses are to be terminated to maintain a balance. Proposal included below. The UUPC approved the program.

The Department of Information Technology and Operations Management (ITOM) proposes that the Healthcare Information Systems (HIS) minor be created for undergraduate students. The HIS minor will be jointly offered by ITOM and Health Administration program. Both ITOM and the Management Department unanimously approved the joint minor. HIS professionals are in demand. Their jobs require the skills that are inherently interdisciplinary comprising both of knowledge in Health Administration and Management Information Systems. While these two disciplines are taught in the College of Business, students rarely take courses across the two disciplines to acquire the necessary knowledge unless
a cross-disciplinary minor is created to encourage specialization in this field. This minor will provide this opportunity to the students.

The Minor in Healthcare Information Systems is a 12-credit program available to all FAU degree-seeking students and enhances the qualifications of students pursuing careers in fields related to healthcare. Professions and majors that will benefit from the minor include healthcare administration, nursing, medicine, biomedical sciences, actuaries, insurance, information technology, management information systems and others.

**PROPOSED TEXT:**

The minor requires successful completion of the courses below with minimum grades of "C." At least 9 of the 12 credits must be earned from FAU. For non-Business majors, waiver of prerequisites will be made on a case-by-case basis.

**ITOM:** Two courses from the following three
1. ISM 4381, Healthcare Information Systems
2. ISM 4041, Social, Legal, and Ethical Issues of Digital Data
3. MAN 4029, Service Operations

**Health Administration:**
1. HSA 3191, Technology in Healthcare Organizations
2. HSA 3111, Health Delivery Systems

The faculty voted unanimously in favor of the creation of HIS minor on February 15, 2012.
Should you require anything further, please contact Tamara Dinev, FL218, extension 7-3181.

7. **Business Intelligence Minor and Certificate name change** [Item 5(g) on Senate Agenda](#)

The Department of Information Technology and Operations Management is proposing changing the names of its Business Intelligence minor and certificate to “Business Analytics” minor and certificate to align with the recently renamed major (approved in fall 2011). The UUPC approved the changes.

8. **Criminal Justice and Criminology Minor revisions** [Item 5(h) on Senate Agenda](#)

The School of Criminology and Criminal Justice is proposing curricular revisions to its Minor in Criminal Justice and Criminology designed to align the minor with the recently revised major. The revisions to both programs are meant to provide more structure, eliminate redundancies and increase academic rigor. Minimum credits (15) would remain the same. Changes to the minor include requiring three core courses and two upper-division electives as opposed to two core courses and three upper-division electives. Explanatory memo included below. The UUPC approved the changes.
MEMORANDUM

To: UUPC Committee

From: Khi V. Thai, Interim Director
School of Criminology and Criminal Justice

Sameer Hinduja, Undergraduate Program Coordinator
School of Criminology and Criminal Justice

Date: February 22, 2012

RE: Request for Revised Minor Curriculum Approval

The School of Criminology and Criminal Justice is pleased to submit a revised curriculum for our Minor in Criminal Justice and Criminology. The revised curriculum proposal is a result much collaboration, feedback, planning, and months of discussion among our faculty; and our CCJ faculty approved it unanimously at our January 17, 2012 meeting.

The revised minor will provide more structure to students in keeping with the new revisions to our Major (which are occurring concurrently). It will also constrain their course choices in a way that gives them a stronger foundation about core concepts taught in specific classes which we believe they must have. It also removes some redundancy in subject matter coverage.

The revised curriculum does not require additional faculty resources, or new course proposals.

Old Program

A minor in Criminal Justice shall consist of a minimum of 15 credits in upper division criminal justice courses. The student must complete:

1. Criminology, CCJ 3014, and The Criminal Justice System, CCJ 3024 (6 credits); and
2. Any three of the electives at the course level of 3000 or above (9 credits).

In the case of transfer students, a minimum of 15 credits of upper division courses with the CCJ, CJC, CJE, or CJL prefix must be taken in residence at Florida Atlantic University, including core courses, if lacking.

New Program:

A minor in Criminal Justice shall consist of a minimum of 15 credits in upper division criminal justice courses. The student must complete:

1. CCJ2002 – Law, Crime, and the Criminal Justice System, CCJ 3014 – Criminology, and CCJ 4054 - Ethics and the Justice System (9 credits); and

2. Any two of the electives at the course level of 3000 or above (9 credits).

In the case of transfer students, a minimum of 15 credits of upper division courses with the CCJ, CJC, CJE, or CJL prefix must be taken in residence at Florida Atlantic University, including core courses, if lacking.
9. Revisions to the Engineering Innovation Leadership Honors Program Item 5(d) on Senate Agenda

The College of Engineering and Computer Science is proposing revamping its Innovation Leadership Honors program. Over the past three-plus years of the program’s existence, it has proven to be credit heavy and logistically difficult to implement and has drawn in fewer students than anticipated as a result. The proposed changes are designed to address those issues in part by reducing the number of credits from 19 to 12. Explanatory memo provided below. The University Honors Council endorsed the proposal. The UUPC approved the changes.

Proposed Innovation Leadership Honor Program Revisions

Introduction and Background

The College of Engineering and Computer Science has recently established the Innovation Leadership Honors Program (ILHP) for outstanding engineering undergraduate students. The top 5 percent of the entering sophomore and transfer students with excellent academic achievement will qualify for the revised Honors Program. Those students will be invited to join the Honors Program after the completion of their pre-professional program.

In 2005, the College Executive Advisory Council, comprised of some 25 top-level engineering and business executives, recommended and encouraged the College to consider a strategy that will prepare FAU Engineering graduates for the workplace of tomorrow. During the spring semester of 2008, the Innovation Leadership Honor Program proposal passed all the approval processes by the University. The proposed program required an overlay of 19 credits to the existing engineering programs.

The Innovation Leadership Program is currently in its fourth year of implementation. It appears, however, that with the overlay of a relatively large number of credits, the curriculum is not sustainable in its current format. After three years, there are 30 students in the program, with the third (last) group consisting of only four students.

Since June 2011, the College Undergraduate Committee has reviewed the ILHP and proposed appropriate revisions. The committee invited a number of individuals to offer input into the process, including the Dean of Undergraduate Programs, the Director of QEP, the Chair of the College Executive Advisory Board, the Director of ILHP and the faculty from the College. In addition, the committee met with all ILHP students and conducted several surveys pertaining to the program. The revised program, which is proposed below, is the outcome of many deliberations by departmental representatives in the Committee and the College’s Associate Dean for Academic Affairs.
Innovation Leadership Honors Program

I. **Objectives:**

1) To develop effective leadership capabilities in top engineering students by exposing them to real-life experiences that require independent decision making, well established goals and objectives and valuable risk-assessment skills.

2) To encourage creativity and innovative thinking in top engineering students by exposing them to undergraduate research and open-ended practical problems.

II. **Eligibility:**

Engineering students with strong academic records and interest in improving their leadership and innovation skills are encouraged to apply for the ILHP program. Students must meet the following program entry requirements:

- A cumulative GPA of at least 3.25 (both from FAU and from each of the previous institutions of higher education attended). After being admitted to the ILHP, students must maintain the aforementioned minimum GPA requirement. If a student’s overall GPA falls below 3.25, a one-semester grace period may be given for improvement.

- Addition eligibility requirements by various departments within the College include:
  
  **CEGE:**
  - Minimum grade of “B+” in Statics for Civil Engineering students.
  - Minimum grade of “B+” in Plane Surveying for Geomatics Engineering students.

  **OME:**
  - Minimum grade of “C” in all of the courses taken.
  - A course grade of at least “B” in both Statics and Engineering Thermodynamics courses.

III. **Requirements:**

Students who are interested in being part of the ILHP must meet the following criteria:

- Two ILHP workshops (EGN 3937, and EGN 4937; one per semester, 1 credit each, S/U Grading). Each ILHP student is required to register for these workshops during the first year of the ILHP program. The workshop format is
already developed for the past three years. The workshops emphasize the elements of leadership and leadership development with the involvement of team projects and hands-on activities. The workshop sequence of 1 credit is part of our current ILHP.

- **Enrichment Experience** (*EGN 4949*, 1 credit, research service or others (S/U Grading). Each ILHP student is required to complete the internship during the ILHP program, where the student will have a leadership role on a team-based project. The Division of Engineering Student Services at the College of Engineering and Computer Science and the FAU Career Development Center will assist placing students in engineering internships. A written report and oral presentation of their work and experience is required.

- **Innovation and Entrepreneurship** (*ENT 4024*, 3 credits). Each ILHP student is required to complete the existing course during the first year in the ILHP. The contents of the course include the principle of creativity, critical thinking, innovation, entrepreneurship, intellectual property, business and financial plans, and marketing. Students will develop and present to potential sponsors a proposal for a venture-funded team project. The course is part of the current ILHP.

- A College ILHP day every semester (including the first year and second year group gathering and sharing information and insights into academic and professional activities).

- All ILHP students (except Computer Science majors) must be actively involved in and provide leadership to any of the student clubs/societies of their choice.

- All ILHP students must either present or participate in FAU Undergraduate Research Symposia.

- All ILHP students must maintain a cumulative GPA of at least 3.25.

- An ILHP student must take one of the following two course options, depending upon his/her designated major:

  (a) **Honors Directed Independent Study** (*EGN 4906*; 3 credits)

- Allows an Ocean and Mechanical Engineering ILHP student to carry out collaborative research projects in the newly established Innovations and Leadership Laboratory. The projects will enable students to investigate multidisciplinary, open-ended problems with systematic design and development plans.
This course can be counted as a Technical Elective for Mechanical Engineering program (excluding the Ocean Engineering program);

- Allows a Civil, Environmental and Geomatics Engineering ILHP student to carry out an honors practical project supervised by a department faculty member and a Department Advisory Board member. Successful completion of the project includes, but is not limited to, a final presentation and a conference paper or poster submission. This course can be counted as a 3-credit Civil Engineering Technical Elective;

- Allows a Computer & Electrical Engineering and Computer Science ILHP student to perform a one-semester mini-research or mini-project guided by one department faculty member. To facilitate this, all department faculty members provide their Honor DIS topics ahead of time and post them on the department website. At the end of the semester, the student is expected to turn in a paper or an extended technical report. This course can be counted as a 3-credit Technical Elective.

(b) Honors Undergraduate Thesis (EGN 4972; 3 credit hours)

- A Computer & Electrical Engineering and Computer Science ILHP student who chooses this course must find a thesis advisor who will be his/her main guide in a basic or applied research project. The student and the advisor will jointly form a three-member thesis committee (consisting of at least one more CEECS department faculty member). It is the student’s responsibility to take the leadership role in organizing his/her thesis defense. The submitted thesis must be bound and be in a format similar to the FAU Master’s theses. This course can be counted as a 3-credit Technical Elective.

10. Revisions to the Engineering Pre-Professional Program Item 5(i) on Senate Agenda

The College of Engineering and Computer Science is proposing changes to its Pre-Professional Program as a result of logistical difficulties with its current structure, including the fact that many transfer students have already taken some currently required courses. The changes outlined below are designed to meet the needs of both FAU students and transfers. The UUPC approved the changes.

Proposed Pre-Professional Program Revisions

Effective fall 2012, entering freshmen and all transfer students will be directly admitted to the revised College pre-professional program. To be admitted to one
of the Engineering or Computer Science programs in the College of Engineering and Computer Science, a student in the pre-professional program must satisfy the following requirements:

1. Students must meet University admission requirements.
2. In each core course listed below, students must obtain a minimum grade of “C” and a GPA in the core courses of 2.5 or greater. Calculation of the core GPA will be based on the highest grade received (in at most two attempts for any of the option-listed courses) in each of the core courses. Advanced-placement credit scores 4 or above will be given credit for the appropriate course(s). A score of 5 is equivalent to an A and a score of 4 is equivalent to a B.

**Pre-Professional Program core courses**

*Department of Electrical and Computer Engineering:* MAC 2281, Calculus for Engineers 1 (1) and MAC 2282, Calculus for Engineers 2 (2).

*Department of Ocean and Mechanical and Department of Civil Engineering, Environmental & Geomatics Engineering:* MAC 2281, Calculus for Engineers 1 (1) and PHY 2043, Physics for Engineers 1.

*Department of Computer Science:*
MAC 1147, Pre-Calculus Algebra and Trigonometry (4 or 5 credits) (4) and COP 2220, Introduction to C.

**Notes:**
(1) MAC 2311 and MAC 2253 are substitutes.
(2) MAC 2312 and MAC 2254 are substitutes.
(3) PHY 2048 is a substitute.
(4) MAC 1140 and MAC 1145 are substitutes.

Students may repeat a core course **ONLY ONCE.** Failure to receive a passing grade in the second attempt is grounds for denial of admission to an Engineering or Computer Science program.

The entry-level mathematics requirement for the engineering programs is Calculus 1. Students who are placed in lower-level mathematics courses based on their ALEKS test scores and who need to maintain full-time status may have problems finding courses that are accepted in an engineering or computer science program in future semesters. This may delay their entry into a particular engineering or computer science program.

After successfully completing the core courses, students may apply to a particular engineering program. Admission will be based on the students’ performance in the core courses. The Division of Engineering Student Services (561-297-2680) is available to assist students in selection of a major field of study.
Students with engineering degrees from ABET accredited institutions will be directly admitted to engineering or computer science programs of their choice.

Students may appeal denial of admission to an engineering or computer science program through the academic petition process. For an appeal to have merit, students must explain new academic or personal information as well as extenuating circumstances. The evidence should show a student's case is stronger than the GPA evidence suggests. The faculty coordinator for the pre-professional program will review the petition according to the established College guidelines and make a recommendation to the academic petition committee.

The College of Engineering and Computer Science fully complies with the State of Florida Common Prerequisites for Computer Science and for Engineering. Students transferring from Florida community or state colleges who meet the pre-professional program course requirements will be directly admitted to the particular engineering and computer science program of their choice.

The College of Engineering and Computer Science participates in the Southeast Florida Engineering Education Consortium, a collaborative effort among public colleges and universities in this region. Detailed advising sheets outlining the courses needed at the community or state college and at FAU are available for students transferring from Miami Dade, Broward and Palm Beach and Indian River colleges. These sheets also provide a useful guide for students transferring from other institutions. Students should contact their community or state college advisor or the FAU department in which they intend to enroll.

11. R.N. to B.S.N. changes Item 5(j) on Senate Agenda
The College of Nursing is proposing adding four required courses to its R.N. to B.S.N. program in order to align with American Association of Critical-Care Nurses standards. This would reduce electives from 12 credits to 3 credits. All courses are currently offered, and additional faculty would not be required. Proposed catalog revisions are highlighted below. The UUPC approved the changes.

New/Revised Catalog:
Courses in the Program: RN to B.S.N.

Required lower-division prerequisite courses will be reviewed with an academic advisor.

To: Graduate Curriculum Committee  
From: Linda K Johnson  
Chair, Department of Visual Arts and Art History  
Florida Atlantic University  
Date: January 26, 2012  
RE: Curriculum Changes to the Master of Fine Arts in Visual Arts

The Department of Visual Arts and Art History was approved to add concentrations to the Master of Fine Arts in Visual Arts beginning Fall 2012. The MFA in Visual Arts will offer concentrations in the following areas: Ceramics, Drawing, Graphic Design, Painting, Photography, Printmaking, Sculpture and Book Arts. Attached is an outline of the curriculum changes that the Department is proposing to facilitate delivery of this program. These program changes can be delivered utilizing the current faculty members and existing resources within the Department.

MASTER’S PROGRAMS

Master of Fine Arts with Major in Visual Art (Changes effective fall 2011.)
The M.F.A. with Major in Visual Art is designed to further the conceptual development, aesthetic presentation, technical skill and career goals of the M.F.A. candidates. M.F.A. degrees are offered in the following studio concentrations: Ceramics, Drawing, Painting, Photography, Printmaking and Sculpture (Boca Raton campus), Computer Art and Graphic Design (Fort Lauderdale campus) and Book Arts (Boca Raton and Fort Lauderdale campuses). These concentrations are designed to incorporate courses from the range of studio areas should the student desire this type of cross-disciplinary approach and flexibility. Graduates of the programs will be prepared for careers as professional artists. The programs will provide opportunities for students to develop their interests and talents at the terminal degree level.

Master of Fine Arts in Visual Art: Ceramics, Drawing, Painting, Photography, Printmaking, Sculpture and Book Arts

Admission Requirements
1. Bachelor of Fine Arts, Bachelor of Arts or equivalent degree.
2. A “B” average or better in all coursework while registered as an upper-division student working for a bachelor’s degree.
3. Graduate admission application submitted online to FAU’s Graduate College. Application is available at www.fau.edu/graduate.
4. Official college transcript(s) submitted to FAU’s Graduate College. Applicants must submit the following to the departmental graduate coordinator, Dorothy F. Schmidt College of Arts and Letters, Florida Atlantic University, Department of Visual Arts and Art History, AH 52, Room 118, 777 Glades Road, Boca Raton, FL 33431.
1. A statement of intent (stating area of concentration) and brief résumé.
2. Three letters of recommendation (preferably from previous instructors and/or professionals familiar with the applicant's academic and artistic background). The letter should be on letterhead or submitted on a form downloaded from the Graduate College website.
3. Portfolio of 20 slides/CD images of recent work in area of concentration. A maximum of four details and/or alternate views is acceptable. Applications for painting must include a minimum of two details. Each image should be identified with name, medium, size, date and the top of the image indicated. CD images must include ID information on disk and a printed description sheet.
4. Copy of official transcript.
5. CD will be returned if accompanied by a self-addressed envelope with sufficient postage.
6. Deadline for applications (online and postmarked): February 21st (fall admission only). Completed admission portfolios must be submitted directly to the Department of Visual Arts and Art History, Attention: Graduate Coordinator. The Graduate College will be notified by the department of the evaluation results and will notify candidates. Only completed portfolios and application packets will be considered.

**Program Requirements and Curriculum**

This full-time M.F.A. program requires a minimum of 60 credits and includes the following distribution of credits. The department admits full-time graduate students in the fall of each year.

**Concentration:**

*Ceramics, Drawing, Painting, Photography, Printmaking, Sculpture or Book Arts*

*24-32*

Art Electives (may be in area of concentration) 12
Art, History or Criticism 12
Free Electives (may be outside the Art Department) 4
Documentation/Thesis Exhibition (required for all M.F.A. candidates) 8
Graduate Documentation ART 6956C 4
Graduate Thesis Exhibition ART 6972C 4

All candidates accepted into the M.F.A. program will be assigned a three-member supervisory committee from the department faculty with at least one member from the student’s stated area of concentration for the first year. The three-member composition of the supervisory committee will change for the second year. At the end of year two, the M.F.A candidate will select a three-member committee (by April 30) that will direct them through their exhibition and thesis statement and documentation in year three. The committee will be composed of the candidate’s major professor (usually from area of concentration) and a member or members of the department faculty. An additional member may be from outside the department and is encouraged. Each committee will meet periodically during each semester to supervise the candidate’s progress for the entire period of study. Candidates are required to meet with their committee for an end-of-semester review each term and individual members are to meet at least once with the student during the term. During the candidate’s first semester, the candidate will be required to give a presentation of their works in an open-attendance forum.

Upon completion of a minimum of 18 credits, candidates will undergo a first-year oral review organized by their committee and voted on by participating department faculty to determine appropriate progress in their studio work.

First-year reviews are scheduled at the end of each spring term. The department’s graduate coordinator sets the
review dates and times. Successful completion of this review is a prerequisite for continuing as a candidate for the degree.
In the last semester of residency, the candidate will present a graduate exhibition in one of the University galleries.
The exhibition will be curated by the M.F.A. candidate and members of the candidate’s committee. An oral examination focusing on the candidate’s work will take place in the exhibition area prior to the opening. Successful completion of this examination is required for awarding of degree.
The Department of Visual Arts and Art History reserves the right to select work from thesis exhibitions for its permanent collection.

Master of Fine Arts in Visual Art: Computer Art
The Master of Fine Arts in Visual Art with a concentration in Computer Art provides graduate study in computer graphics, design and animation for artists who wish to use sophisticated computer software and hardware for artistic expression. The M.F.A. is an advanced creative degree requiring initiative and independence on the part of the student.
Graduate research and study focuses upon the fine art of 3D graphics and animation in a 60-credit program combination of studio work, creative workshop and seminar discussions. For students unfamiliar with 3D software, study begins with training courses in Alias/Wavefront Maya software. Mastery of software gains students entry to creative workshop critique and the department’s extensive video, audio and computer editing suites.

Admission Requirements
1. Bachelor of Fine Arts, Bachelor of Arts or equivalent degree from an accredited college or university or, for international students, an institution recognized in its own country as preparing students for further study at the graduate level.
2. The minimum University admission requirements are either a “B” average or better in all work attempted while registered as an upper-division student working for a bachelor’s degree; or a graduate degree from an accredited institution.
3. Graduate admission application submitted online to FAU’s Graduate College. Application is available at www.fau.edu/graduate.
4. Official college transcript(s) submitted to FAU’s Graduate College.
Applicants must submit the following to M.F.A. in Computer Arts, Department of Visual Arts and Art History, Florida Atlantic University, 111 E. Las Olas Blvd., AT 812, Fort Lauderdale, FL 33301.
1. Three letters of recommendation.
2. Résumé.
3. Statement of intent. Candidates need to submit a two-page essay describing their creative aims and reasons for graduate study
4. Portfolio that includes examples of applicant’s electronic media, animation and/or 3D modeling work. Candidates must include a project description sheet with their portfolios.
5. Copy of official transcript.
6. Portfolio will be returned if accompanied by a self-addressed envelope with sufficient postage.
7. Deadline for applications (online and postmarked): October 31st for spring admissions and February 21st for fall admissions.
Completed admission portfolios must be submitted directly to the Department of Visual Arts and Art History. The Graduate College will be notified by the department of the evaluation results and will notify candidates. Only completed portfolios and application packets will be considered.

Computer Art Requirements and Curriculum
The M.F.A. in Visual Art with a concentration in computer art is offered at the Fort Lauderdale campus. This M.F.A.
The program includes the following distribution of credits:

**Course Credits**

- Studio in Computer Arts ART 6688C 16
- Creative Workshop in Computer Arts ART 6692C 16
- Computer Arts Seminar in Contemporary Art ARH 6931 4
- Computer Arts Seminar in General Theory ARH 6932 4
- Electives (may be in the concentration) 12
- Portfolio/Directed Study ART 6693C and ART 6907C 8
- Total 60

After completing 30 credits and two short animations to demonstrate artistic and technical proficiency, students are eligible for M.F.A. candidacy. Students are then required to complete another 30 credits and two more animations.

Awarding of the Master of Fine Arts degree is based upon completion of 60 credits and acceptance of an artistic portfolio that meets the criteria of publishable quality commensurate with professionals in the field of computer arts.

Many of the animations created by our graduate students have won international recognition from video festivals, and their work is regularly aired on educational television.

In addition to a residential program, the department offers a distance learning M.F.A. in Computer Arts. This virtual degree is open to accomplished artists with knowledge of 3D software and the ability to study independently. The degree takes approximately three years to complete. At least once a semester, distance learning students participate on campus with the residential students in creative workshop and seminar sessions, including special event seminars and personal critical analysis of graduate student work by professional animators.

The Department of Visual Arts and Art History reserves the right to select work from thesis exhibitions for its permanent collection.

Students from Alabama, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia may be eligible to attend the program at FAU at in-state tuition rates through the Academic Common Market.

**Master of Fine Arts with Major in Visual Art: Graphic Design**

The Master of Fine Arts with Major in Visual Art with a concentration in graphic design engages students in an individual pursuit to expand their knowledge of visual communication design systems with a focus on furthering development toward a career in design education and/or professional practice. Students and faculty from diverse cultural, educational and professional experiences come together to engage in critical discourse that challenges and strengthens each student's understanding of communication theory, research methodology and design problemsolving approaches. Encouraged to identify and expand their own voices as designers, students take a combination of graduate design studios, seminars, art history courses and directed independent study projects, culminating in a graduate thesis project, exhibition and document. Graduate students are expected to take a leadership role in the department and in their interactions with undergraduate students.

**Admission Requirements**

1. Bachelor of Fine Arts, Bachelor of Arts or equivalent degree from an accredited college or university or, for international students, an institution recognized in its own country as preparing students for further study at the graduate level. Degrees in graphic design or visual communication design are preferred. Candidates from other
curricula will be considered based on abilities demonstrated in portfolio, statement of intent and space available. Two years' experience in the graphic design practice is preferred.

2. The minimum University admission requirements are either a "B" average or better in all work attempted while registered as an upper-division student working for a bachelor's degree; or a graduate degree from an accredited institution.

3. Graduate admission application submitted online to FAU's Graduate College. Application is available at www.fau.edu/graduate.

4. Official college transcript(s) submitted to FAU's Graduate College.

Applicants must submit the following to Graphic Design, Department of Visual Arts and Art History, Florida Atlantic University, 111 E. Las Olas Blvd., AT 314, Fort Lauderdale, FL 33301.

1. Three letters of recommendation.
2. Résumé.
3. Statement of intent. Candidates need to submit a two-page essay describing their creative aims and reasons for graduate study.
4. Portfolio that includes 20 examples of applicant's graphic design or electronic media work. Each item should be labeled with media, title, name, address and phone number. Portfolios should be submitted on a CD-ROM. Candidates must include a project description sheet with their portfolios. Website examples should list the URL on project description sheet.
5. Copy of official transcript.
6. CD will be returned if accompanied by a self-addressed envelope with sufficient postage.
7. Deadline for U.S. applicants' applications (online and postmarked): October 31 for spring admissions and February 21 for fall admissions. For international applicants, the application deadline for spring admission is September 1.

Completed admission portfolios must be submitted directly to the Department of Visual Arts and Art History. The Graduate College will be notified by the department of the evaluation results and will notify candidates. Only completed portfolios and application packets will be considered.

**Graphic Design Requirements and Curriculum**

The M.F.A. in Visual Art with a concentration in graphic design is offered at the Fort Lauderdale campus. The graphic design program requires a total of 60 credits of study. It includes the following distribution of credits.

**Area of Concentration Credits**

Graphic Design 24-32
Art Electives (may be in area of concentration) 12
History and Theory of Art and Design 12
Free Electives 4
Research Project (Design Thesis and Exhibition) 8

Graduate courses in the graphic design area of concentration are 4 credits each for a total of six required courses. Complete course descriptions are included in this catalog. The courses for the 24-32 credits in Graphic Design are as follows:

**Course Credits**

Design Workshop, Experimental Design Projects, Advanced Study of Graphic Design, Experimental Visual Techniques (special topics, may be repeated) 24
Design Studio ART 6931 4
Design Seminar ART 6932 4
Design Thesis/Individual Studio Problems ART 6971C 4
Graduate Thesis Exhibition ART 6972C 4

All candidates accepted into the M.F.A. Graphic Design track will be assigned a three-member supervisory committee.
from the department faculty with at least two members from the Graphic Design area of concentration the first year. Candidates are required to select their own graduate committee upon completion of candidacy review. The committee will be composed of the candidate’s major professor (thesis advisor) and two members from the department faculty. An additional member may be from outside the department. Upon completion of 30 credits, candidates will undergo a candidacy review by their committee to determine appropriate progress in the Graphic Design track. Successful completion of this review is a prerequisite for continuing as a candidate for the degree. In the last semester of study, the candidate will present a thesis exhibition. The exhibition will be curated by the M.F.A. candidate and members of the candidate’s committee. The M.F.A. candidate is required to produce written documentation of research, including a detailed explanation of the thesis exhibition. Copies of thesis documentation must be presented to the committee no less than three weeks prior to the thesis exhibition. An oral examination focusing on the candidate’s work will take place directly following the presentation of thesis exhibition. Successful completion of this examination is required for awarding of degree. The Department of Visual Arts and Art History reserves the right to select work from thesis exhibitions for its permanent collection.

**Master of Fine Arts in Visual Art**

The M.F.A. in Visual Art is designed to further the conceptual development, aesthetic presentation, technical skill and career goals of the M.F.A. candidates. M.F.A. degrees are offered in the following studio concentrations: Ceramics, Drawing, Painting, Photography, Printmaking and Sculpture (Boca Raton campus), Graphic Design (Fort Lauderdale campus) and Book arts (Boca Raton and Fort Lauderdale campuses). These concentrations are designed to incorporate courses from the range of studio areas should the student desire this type of cross-disciplinary approach and flexibility. Graduates of the programs will be prepared for careers as professional artists. The programs will provide opportunities for students to develop their interests and talents at the terminal degree level.

**Master of Fine Arts in Visual Art:** Ceramics, Drawing, Painting, Photography, Printmaking, Book Arts and Sculpture

**Program Requirements and Curriculum**

This full-time M.F.A. program requires a minimum of 60 credits and includes the following distribution of credits. The department admits full-time graduate students in the fall of each year.

**Concentration:**

*Drawing, Painting, Photography, Printmaking, Book Arts or Sculpture*
Graduate Studio 20
Art History
Seminar in Contemporary Art ARH 6481 (required) 12
Professional Practices or approved equivalent course 6
Special Topics or Directed Independent Study 8
Free Electives (4 credits may be taken outside the Art Department) 6
Documentation/Thesis Exhibition (required for all M.F.A. candidates)
Graduate Documentation ART 6956C 4
Graduate Thesis Exhibition ART 6972C 4

**Concentration: Ceramics** 24-32

Art History:
Seminar in Contemporary Art ARH 6481 (required)
History of Ceramics (required) 12
Professional Practices or approved equivalent course 4
Art Electives (may be in area of concentration) 8
Free Electives (may be taken outside the Art Department) 4
Documentation/Thesis Exhibition (required for all M.F.A. candidates)
Graduate Documentation ART 6956C 4
Graduate Thesis Exhibition ART 6972C 4

**Master of Fine Arts in Visual Art: Graphic Design**

The Master of Fine Arts in Visual Art with a concentration in graphic design engages students in an individual pursuit to expand their knowledge of visual communication design systems with a focus on furthering development toward a career in design education and/or professional practice. Students and faculty from diverse cultural, educational and professional experiences come together to engage in critical discourse that challenges and strengthens each student's understanding of communication theory, research methodology and design problem-solving approaches. Encouraged to identify and expand their own voices as designers, students take a combination of graduate design studios, seminars, art history courses and directed independent study projects, culminating in a graduate thesis project, exhibition and document. Graduate students are expected to take a leadership role in the department and in their interactions with undergraduate students.
**Graphic Design Requirements and Curriculum** The M.F.A. in Visual Art with a concentration in graphic design is offered at the Fort Lauderdale campus. The graphic design program requires a total of 60 credits of study. It includes the following distribution of credits.

**Concentration:**

*Graphic Design* 24-32

Art History

History of Graphic Design (required)

Seminar in Contemporary Art ARH 6481 (highly recommended)

12

Art electives (may be in area of concentration) 12

Free Electives (may be taken outside the Art Department) 4

Design Thesis/Thesis Exhibition (required for all M.F.A. candidates)

Design Thesis ART 6971C 4

Graduate Thesis Exhibition ART 6972C 4

### Adult/Gerontological Nurse Practitioner (AGNP)

**Introduction to the Adult/Gerontological Nurse Practitioner Role**

This consultation provides students with advanced skills and knowledge to assume the role of Adult/Gerontological Nurse Practitioner with emphasis on responding to the health needs of older adults. The unique features of this program are that it is tailored to prepare students to become advanced practice nurses in geriatric and primary care.

The Adult/Gerontological Nurse Practitioner curriculum consists of a total of 60 credit hours. The program is typically completed in 2 years. The curriculum requires a minimum of 300 hours of required clinical practice. Achievement of competence may require more than 330 hours. Practicum occurs in health department clinics, primary care offices, home health agencies, hospice, long-term care facilities, and extended care facilities.

Graduates of the Adult/Gerontological Nurse Practitioner program are eligible to sit for the Certification Examination offered by the American Nurses Credentialing Center (ANCC).

*Requires 300 hours of clinical experience in adult role and in community.
**Requires 150 hours of clinical practice experience.
***Requires 200 hours of clinical practice experience.
The School of Criminology and Criminal Justice is excited to announce a revised Master of Science degree in Criminal Justice and Criminal Justice (MSCJ) for our students. The product of this effort is a result of more collaboration, teamwork, and resources to enhance our expertise and the strength of our master's degree. We believe that our unique approach to criminology and criminal justice education will best prepare our students for the complexities of today's workforce as either criminal justice practitioners or leaders. We are also excited to offer the program from both the criminology and criminal justice perspectives. Our goal is to ensure that students, regardless of whether they major in criminology or criminal justice, can complete the program. Changes to the program's curriculum involve the following:

1) Admission requirements;
2) Core requirements;
3) Thesis requirements;
4) Field requirements, and
5) Specialization opportunities.

These changes are designed to help students achieve their goals more effectively and efficiently. We have taken into account the feedback from our students and faculty to make these changes. We believe that these changes will enhance the program's quality and relevance to today's workforce.
Current
- BA from an accredited institution
- 3.0 GPA in last 60 credits
- 8000 in GRE
- Letter of interest

Proposed Changes
- BA from an accredited institution
- 3.0 GPA in last 60 credits
- GRE in undergraduate research methods and theory (any major)
- An outline of written work
- A letter of interest

Note: The GRE requirement for admission has been removed, but it would still be evaluated by any student for consideration. If the student was deficient in other categories, we have retained the GRE requirement because we have determined that it is not a predictor of success in our program. The new admission requirements that we have developed are intended to provide a more effective tool to evaluate and ensure a student's future success in our program. Also, other Criminal Justice Masters programs in Florida do not require the GRE for admission (e.g., Florida International University, Central Florida University, University of South Florida, and Nova Southeastern), and other Schools within the College of Design and Social Inquiry have eliminated the GRE as a requirement (e.g., Social Work, Public Administration, Non-Profit Management).

Core Course Requirements

Current (3 credits)
- CJC 4454 Criminology
- CJC 6704 Research Methods
- CJC 6920 Theoretical Readings in the Criminal Justice Process
- PAD 6701 Applied Methods for STA 6113 Educational Research

Proposed Changes (3 credits)
- Remove requiring either PAD 6701 Applied Methods for STA 6113 Educational Research
- The internal of three credits for the core will be made up in the "elective requirements" discussed at the end of this section.

Proposed Name Changes to Core Courses
- CJC 4454 Understanding Criminal Behavior
- CJC 6704 Research Methods and Data Analysis
- CJC 6920 Criminal Justice Research and Policy Foundations

*Course name changes have been added with effect 2012 but are listed here to some how they will be changed to be more representative of the program's content and more appealing to students. The content of each of these courses will remain the same.*
Elective Course Requirements

Current
- Must obtain a minimum of 18 unrestricted elective credits, up to 9 of which may be taken outside CJ
- Must obtain 3 restricted elective credits, up to 6 of which may be taken outside CJ with coordinator approval

Proposed Changes (Both Thesis and Non-Thesis Options)
- Restricted Electives (6 credits, choose two of the following five courses):
  1. CJ 6425 Policy Research, Policy, and Practice*
  2. CJ 6421 Corrections
  3. CU 6435 Juvenile Justice
  4. CU 6445 Organizational Culture in Criminal Justice Agencies
  5. CU 6460 Leadership, Ethics and Ethics in Criminal Justice

- Unrestricted Electives (12 credits, any of the following courses, also include courses listed as restricted elective but not taken to satisfy that requirement):
  a. CU 6442 Restorative Community Justice
  b. CU 6466 Leadership and Future Issues in Criminal Justice Agencies
  c. CU 6481 Management of Justice Policy
  d. CU 6485 Public Policy Models
  e. CU 6491 Victims and the Justice Process
  f. CU 6496 United Nations and Community Safety
  g. CU 6497 Special Topics

- Students will still be able to take up to 9 credits from outside CJ with approval from the coordinator and will still retain this category.

*Major changes to the CJ 6425 have been made, thus a change form and new syllabus have been provided for approval. CJ 6421 is a new course, thus the approval form has been provided as well.

Proposed Course Changes to Electives
- CJ 6421 Corrections Research, Policy, and Practice
- CU 6415 Graduate Criminal Justice, Policy, and Practice
- CU 6422 Restorative Justice Research, Policy, and Practice
- CU 6424 Leadership in Criminal Justice Agencies
- CU 6444 Legislative Research, Policy, and Practice

*Course name changes have been noted until August 2022. The included here to show how they will be changed.

From: Charles K. Schmidt College of Medicine

Re: course change requests and new course proposals

As the result of comments and suggestions made during our preparation for our upcoming accreditation site visit by the Liaison Committee on Medical Education and from our continuous program evaluation, we are submitting a number of minor modifications to the courses which your group previously approved.

We have developed a chart which shows the name of the course, the proposed change, and the reason for the change.

With respect to the new course request, we would like to note that we are trying to address one of the biggest problems in medical school curriculum, the transition from primarily basic science courses in the second year to the clinical clerkships in year three.

24th February 2012

Subject: Catalog Revisions for Mechanical Engineering Graduate Program

For Dr. William Frasier, Chair College Graduate Committee

From: Stewart Glegg, Chair OME Graduate Committee

On 2/29/12 the OME department faculty voted unanimously to revise the Mechanical Engineering Graduate program to include three new courses. This has required adding the new courses to each of the program option requirements given in the University catalog. In addition we have added detail by specifying the Mathematics courses that will be taken by the Master's Level candidates and we added the University requirement for number of courses passed at the 900 level and in the major area of study. We have also updated our requirements for the GRE, and added the ME/Work and program as requested by the Dean's office. Finally, we have added the requirement that the students pursuing the above options must submit a thesis proposal in their third semester of full-time study (approved by the OME faculty on 3/1/12). I am forwarding this request to the College graduate committee for their consideration.
Dear Dr. William Rhodes, Chair College Graduate Committee

From: Stewart Greg, Chair OMS Graduate Committee

29th February 2012

Subject: Catalog Revisions for Mechanical Engineering Graduate Program

On 2/29/12 the OMS department faculty voted unanimously to revise the Mechanical Engineering Graduate program to include three new courses. This has required adding the six courses to each of the program options as described in the University catalog. In addition, the Mathematics courses that will be taken by the Master’s Level students will be limited to the University requirement of either one or two courses per semester. We have also updated our requirements for the MSE, and updated the MSE Master’s program to reflect the changes. Finally, we have added the requirement that students pursuing the Master’s degree must enroll in this proposal as their first semester of full-time study (approved by the MSE faculty on 2/29/12). I am forwarding this request to the College graduate committee for their consideration.
24 February 2012

Subject: Catalog Revisions for Mechanical Engineering Graduate Program

For Dr. William Rhodes, Chair College Graduate Committee

From: Stuart Glegg, Chair OCEM Graduate Committee

On 2/28/12 the OCEM department faculty voted unanimously to revise the Mechanical Engineering Graduate program to include three new courses. This has required adding the new courses to each of the program option requirements given in the University catalog. In addition we have added details by specifying the Mathematics courses that will be taken by the Thesis Level students and we changed the University requirement for number of courses required at the 6000 level and in the major area of study. We have also updated our requirements for the GRCs and updated the ME West end program as requested by the Dean’s office. Finally we have added the requirement that the students pursuing the Thesis option must enroll in their proposal in their first semester of full-time study (approved by the OCEM faculty on 3/1/12). I am forwarding this request to the College graduate committee for their consideration.

Item 7(g) on Senate Agenda See PDFs below
Proposal for joint BS in Engineering and Computer Science and MS Degree Program in Bioengineering

(Approved by the College of Engineering and Computer Science Graduate Studies Committee at its 2012/2013 meeting)

Introduction

Joint BS and MS programs in all engineering and Computer Science disciplines already exist. It is proposed that similar option is granted to Bioengineering students as well.

Purpose

The proposal is for a joint BS degree program in any of the Engineering and Computer Science programs and MS in Bioengineering. This joint program is expected to take an approximate duration of five years. The basic idea is to allow 5 credits of graduate course work count as BS as well as an MS degree. This essentially takes one year of graduate study and offers an attractive option for undergraduates planning for their graduate education. This program is expected to help retain our brightest undergraduate students for continuing their MS degree. This may also persuade them to go for their doctoral education.

Eligibility requirements and process

- Students with a cumulative GPA of 3.5 or better at the end of their junior year are eligible to participate in this program.
- Students must retain a cumulative GPA of 3.25 by the time of graduation.
- Students participating in the joint degree program may opt for thesis or non-thesis option at their MS degree.
- Students planning for their MS need a letter of recommendation from their potential thesis advisor.

Process

- At the end of junior year, a list of students eligible to participate in the joint BS/MS degree program will be generated based on their cumulative GPA of 3.25 or better at the end of their junior year.
- These eligible students will be invited to apply for the joint BS/MS degree program.
- The students who accept the invitation will be asked to formally apply for graduate admission at the beginning of their senior year.
- The remaining two semesters of the joint BS/MS degree program must be completed at least one semester prior to the start of the MS degree program.
• Eligible students, with the approval of their academic advisor, may begin taking graduate courses in their junior year that would apply to both their BS and MS degrees. This should be done in consultation with both the student’s undergraduate advisor as well as the faculty advisor for the Engineering MS program. A maximum of 9 credits can be applied to both BS and MS degrees.

• A minimum of 6 credits of 4000-level electives from the College of Engineering and Computer Science can be counted for both the BS and MS programs.

• Students in the joint BS/MS degree program must maintain full-time enrollment in order to remain in the joint BS/MS degree program.

• Students who successfully complete their MS degree within two years after their BS degree, will be presented a certificate of recognition.

Degree requirements

Students participating in this program must meet all the degree requirements including core courses, prerequisites, etc. The only exception in this program is counting 9 credits in both BS and MS degrees similar to other joint BS to MS programs in Engineering and Computer Science.

Benefits to the College

The proposed joint BS/MS degree program will help retain our brightest undergraduate students as graduate students. The program will certainly help counter the declining graduate enrollment. The program is also expected to help increase enrollment in our graduate courses and graduate degree production.
MEMORANDUM

TO: University Graduate Program Committee

FROM: All Zilouchian, Associate Dean for Academic Affairs

SUBJECT: Proposal for Joint BS/MS in Bio-Engineering Program

DATE: March 15, 2012

Attached please find the proposal pertaining to joint BS in Engineering and Computer Science and MS in Bio-Engineering. The document was unaniemously approved by the College Undergraduate Committee on February 29, 2012. The proposal has the full support of the College administration.
Due to the renaming of the CECES in Summer 2003, the Bioengineering Program became administratively part of the CECES Department (with Dr. Patel assuming leadership of the program) and Dr. Roth, as part of his duties as Associate Chair of the CECES department, continuing as Faculty Advisor and as a member of the Admissions Committee.

Starting in Fall 2006 the CECES department used its own limited resources to hire the first academic faculty for the Bioengineering Program (Professors Pellicer, MD/PhD). The investment has so far paid off handsomely as Dr. Pellicer's contribution to the program, courses and research vision, have become inseparable.

In Fall 2010 the CECES department moved to its new place in the Engineering East building, and out of the CECES department's research lab became a Bioengineering research lab. It is essentially a completely independent program with its own identity.

Between Fall 2006 and Fall 2011, there were 14 applications to the MS program at which 8 students were admitted, 9 of whom have graduated by Fall 2011 (with a thesis option).

As of Spring 2012, there are 13 active students in the program, of whom 4 are expected to graduate in Spring 2012. The certificate program continues to exist as an option but only a handful of students have chosen to pursue it in recent years.

II. Faculty and Staff Associated with the Bioengineering Program

There are no faculty or staff members who "belong" to the Bioengineering Program, other than a full-time board member and a part-time board member.

All Bioengineering courses are taught by CECES regular faculty (primarily from the CECES and CML departments: Drs. Neidhardt, Roth, Patel, Rhodes, Huisingh, Zhai, Zhang, Matz, and Ne) and by one adjunct faculty (Dr. Mejia-Peck).

One CECES faculty (Dr. Pellicer) provides student advising and students applications and admission services. Placement of students into and selection of students to the Bioengineering students are provided by the CECES Graduate Programs Coordinator (Ms. Jean Mengistu).

Dr. Roth also coordinates all curricular matters in consultation with the CECES Bioengineering Committee, with the other CECES college-wide Bioengineering group of faculty, and by occasional contacts with faculty in the College of Science (most notably Dr. Stojanovic and Benger).

III. Bioengineering Program Academics – An Overview

Bioengineering stands at the intersection of the revolution taking place in advanced medical treatments as a result of applying the principles and practices of the engineering and computer science disciplines to the biological, biochemical and medical sciences. Bioengineering is a broad and emerging field that impacts drug delivery, surgery, diagnostics, prevention and treatment. Students successfully completing the Masters of Science in Bioengineering program are expected to be prepared for professional careers in businesses related to medical, diagnostic, prosthetic devices and related and other industries: the pharmaceutical and biotechnology industries, and consulting in health-related fields, as well as other positions in industry, commerce, education and government. Students are also expected to be prepared to continue their formal education at the Ph.D. level in a variety of science and engineering disciplines and at the M.D. level in certain cases.

Admission requirements to the Bioengineering MS program (undergraduate GPA, GRE scores, TOEFL scores, etc.) are identical to those of any other CECES MS program. The big difference lies in the
wide spectrum of undergraduate disciplines of students who so far have been admitted to the program. Students may come from a life science background (with typical math education extending to Calculus 2 and no computer programming background) or from engineering background (with typically only one course in chemistry, and no biology courses at all).

Several undergraduate courses were designated as deficiency courses. All engineering students must take PCB 1060 Chemistry during their MS studies. A special agreement between the COTEC and the College of Science allows bioengineering students to register in PCB 1060 during the Organic Chemistry and Biochemistry prerequisite courses. Incoming Life Science students are encouraged to take one of the COMP programming courses as a deficiency if they find the program core courses to be too hard on the programming side.

A set of core courses was created (12 credits altogether) designed to bring all incoming students to a reasonable common denominator. The core courses consist of BMI 5400 Introduction to Biotechnology, BMC 5742 Bioinformatics Modeling and Control, BCL 6750 Biotechnology, Bioinformatics, and Microbiology Labs. Each of these courses is offered at least once a year.

In addition, a menu of courses which includes both engineering and science electives is updated every semester and is a tool to facilitate students' advising.

All new thesis students are encouraged to take 3 credits of a DNS course which they do a one-semester mini-research project under the guidance of one of the faculty associated with the Biotechnology Program.

IV. Bioengineering MS Program Enrollment and Graduation Data

The following table summarizes student enrollment and graduation figures from Fall 2008:

<table>
<thead>
<tr>

</table>
A partial post-graduation accounting of the 9 students who have graduated by Fall 2011. 2 went to medical school, 2 went to PhD programs outside FAU, 2 went to PhD programs in FAU, 1 was hired by industry (and we are still trying to find out more about that company), 1 stayed at his employment place (Navy) and one of the students who graduated in Fall 2011 is probably still undecided what to do next.

The following table summarizes the background disciplines of the students enrolled in the FAU Biomedical Engineering Program revealing a surprising fact that the majority of students (around 50%) are coming to the Biomedical Engineering Program from a Life Science background.

V. Enrollment Data of the Bioengineering Program Courses

In this report we look only at engineering and computer science courses which are part of the MS in Bioengineering degree program. No analysis has been done about the science courses which are acceptable for the bioengineering program.

The two tables below look at enrollment trends in four courses having a course number that starts with BME, three of which are core courses in the Bioengineering Program. We look at enrollment figures from the date of inception (which in all cases happened when the certificate program was introduced). All the courses were designed to be appealing as general electives for students who may not necessarily be in the Bioengineering Program.

Comment:

1) There was a period during the years 2007-2008 that the BMIE 5600 course was offered only as a directed independent study option due to Dr. Morgan's busy schedule. The course has not been taught this year. It is now taught every Spring semester and it shows healthy student enrollment figures. It is a popular general graduate elective as well as general undergraduate senior elective.

2) The BMIE 5742 Biomechanics Modeling and Control course had periods of frequent offerings correlating with Dr. Malat's 50% administrative duties as Director of the Florida-Israel Institute (that lasted from Fall 2007 to Fall 2008). In the last two years the course has been offered every Fall semester.

3) The course BMIE 6752 Bioinformation Bioengineering Perspectives has in recent years been offered regularly every Fall semester.

4) The BMIE 6772 Nanotechnology course is offered every Fall semester. Enrollment figures become poor when the course begins to be chiefly offered at the graduate and undergraduate levels.

5) No Bioengineering courses were offered in Summer 2008.

The following two tables summarize enrollment in elective courses offered in both the certificate and MS degree programs. Each row often accounts for more than one course on the subject.

### Bioengineering elective courses Fall 2003 – Spring 2008 (Certificate Program)

The CBEC department offers several courses in Database Systems and on Data Mining and Machine Learning. These courses have been designed to complement the regular Computer Science or Engineering curriculum. They can also serve as good elective options for Biomedical students who are interested in the field of Bioinformatics. Some of the Data Mining courses even aimed specifically at Bioinformatics (Fall 2007, Fall 2008).

2) The robotics and image processing courses are important electives for students who are interested in areas of neuroscience or drug discovery and biotechnology. A robotics course is offered at least once every two years, and imaging for the image processing course.

3) The Biomedical Engineering course was developed by Dr. Panokar as a direct follow-up course to Bioengineering. It is offered every fall semester.

4) The Biomedical Processing course was especially developed by Dr. Edele for the Biomedical Engineering program. So far it was taught only once.

5) The Medical Imaging course was especially developed by Dr. Rhee for the Biomedical Engineering program. It is offered at least once every two years.

VI. Potential Opportunities

1) Many students have been interested in the fall year by undergraduate students interested in pursuing a joint BS in an engineering or science field and MS in Biomedical Engineering. A recent CSEBS Graduate Committee resolution involving the addition of Biomedical to other CSEBS BS to MS programs is not yet approved by the University Graduate Studies Committee. Once approved, there is potential for an enrollment increase.
2) The CORES Bioengineering Group has recently created a task force charged with revising the Bioengineering Program curriculum to make it more intuitive to Mechanical, Ocean and Civil Engineering students. Such a college wide collaboration holds a key for future enrollment increases.

3) An aggressive faculty search in the area of Genetic Technologies currently a priority research area for FAU has several Bioengineering researchers in the group of finalists. If one such faculty is hired it will be a big boost for the Bioengineering Program, curriculum wise and research wise.

4) Theoretically speaking, an Engineering program anywhere in the state, better placed than the FAU Bioengineering program, however, in order to take full benefit of the large resource presented by the presence of Scripps Florida, New Planta Florida (brittle, VFTI, Torrey Pines in our area) would require a full time Bioengineering Program Director.

5) The FAU MEng program holds a key for the development of a future PhD program in Bioengineering. It is estimated that 50% of the MEng students may become interested in pursuing their PhD in an Engineering field.

6) The large FAU Pre-Med program holds a promise for a successful Master MS program in Bioengineering. Among all CORES engineering programs Bioengineering will be the only realistic pre-med option for engineering students. It is estimated that 10% of the university pre-med students may opt for a MS degree in Bioengineering.

7) One of the elements of the so called "Higher Initiative", which is still on the drawing board, was a plan to expand the Bioengineering Program on the FAU Jupiter campus. The proximity to Scripps and VFTI and the potential for faculty creating research "hot spots" for the program are favorably promising.

8) There was a discussion at the last meeting to create a joint CORES-College of Science weekend MS Program (modeled after the successful Computer Science MS program) building upon the Bioengineering and the Biotechnology programs. Such a weekend program can become an important income source for both programs.

9) The lack of Bioengineering "wet lab" really holds back many of the Bioengineering Program research initiatives. It is believed that so much money has recently been spent by the CORES on renovation of the Engineering West building and specifically for creating architectural drawings for a conversion of the lab in Engineering West Room 246 to a new and modern
VII. Potential Threats

1) The Bioengineering Program has been very "thin" in terms of its main power. It is very sensitive to availability (or lack of availability) of its participating faculty.

If, for example, for any reason, it becomes impossible to continue hiring Dr. Pavlovic, the impact on the program curriculum will be devastating.

As another example, it is yet for the COBES to feel the impact of Dr. York's 2012-2013 unpaid leave on the administrative running of the programs and on the instruction of one of the program's core courses.

2) As said earlier, the Bioengineering Program is ideally positioned geographically and strategically. The potential for strong research collaboration with our allies on the north is large but the opportunity has not been utilized. Not utilizing it may result in an irreversible program's loss of credibility.

VIII. Summary

Even actions of budget cuts as Investment sometimes may be the best course of action.

There is no doubt that the COBES views the Bioengineering Program as one of its best near future growth areas and as a future independent engineering department.

The program needs full time faculty, full time director, well-lab space and equipment.

RESPONSIBILITY TO: UFS Steering Committee
FROM: Dr. Timothy Lenz, Chair, UFS Academic Planning and Budget Committee
This is the revised proposed meeting schedule for academic year 2012-2013. It includes a change in the dates of the November and December meetings to avoid a conflict with commencement. I also checked to make sure that meetings were not scheduled for Good Friday. The Steering Committee meetings are scheduled for Tuesdays from 2:30-3:30 in the Provost’s Conference Room and the UFS meetings are scheduled for Fridays from 2:00-4:00 in the BOT Room.
