### Course Description

This course provides an interdisciplinary introduction to neuromechanics, a field at the intersection of neuroscience, engineering, and computational science. Students will explore the fundamental principles of neural systems, signal processing, and neuroengineering technologies. The course emphasizes the integration of engineering techniques with neuroscience to understand and manipulate neural systems for medical and technological applications.

- *Understand the basic principles of neuroanatomy, neurophysiology, and neural engineering.*
- *Evaluate the latest advancements in neuroengineering research and technology.*
- *Apply engineering principles to design and develop innovative solutions for neural repair and regeneration.*
- *Critically analyze ethical and regulatory issues related to neuroengineering.*

### Instructional Method

This class is designated as one mode: In person. Attendance: Optional but highly recommended.

### Prerequisites/Corequisites

Undergraduate course in Biomechanics or equivalent or instructor's permission.

**Building:** TBD

**Room:** TBD

**Days:** TBD

**Time:** TBD

## Course Evaluation Method

**Assessment:** Assessment methods may include exams, quizzes, laboratory reports, research papers, and class presentations. Students may also be evaluated based on their participation in discussions and group projects.

- 10 Weekly in-class quizzes (20%)
- Midterm examination (30%)
- Final examination (30%)
- Final Project (20%)

**Course Format:** The course is structured around lectures, laboratory and interactive discussions. Students will have the opportunity to engage with cutting-edge research articles, case studies, and planned guest lectures from experts in the field.

**Final Project:** Graduate students currently engaged with neuroscience/biomechanics research labs at FAU will further advance their work by preparing a research relevant Methods and Materials document, in the student's field of study. The written document will accompany an end-of-semester 10-minute in-class presentation on their work.

## Course Grading Scale

Grade 90 and above: "A", 86-89: "A-", 82-85: "B+", 78-81: "B", 74-77 : "B-", 73-76: "C+", 69-72: "C", 65-68: "C-", 61-64: "D+", 57-60: "D", 51-56: "D-", 50 and below: "F."

## Policy on Makeup Tests, Late Work, and Incompletes (if applicable)

There are no late assignments. There will be no make-up exams unless specifically approved by the instructor in advance or excused by official documentation (i.e. hospital discharge, police report...).

Regularly scheduled doctors' appointments are not acceptable excuses for missing an exam.

**WE WILL ALWAYS MAKE ACCOMMODATION FOR CONFLICTS WITH RELIGIOUS OBSERVANCE, BUT THESE MUST BE COMMUNICATED WITH THE INSTRUCTOR IN ADVANCE OF THE EXAM.**

## **Classroom Etiquette Policy (if applicable)**

Class attendance optional but recommended.

## **Attendance Policy**

*Students are expected to attend all of their scheduled University classes and to satisfy all academic objectives as outlined by the instructor. The effect of absences upon grades is determined by the instructor, and the University reserves the right to deal at any time with individual cases of non-attendance. Students are responsible for arranging to make up work missed because of legitimate class absence, such as illness, family emergencies, military obligation, court-imposed legal obligations or participation in University-approved activities. Examples of University-approved reasons for absences include participating on an athletic or scholastic team, musical and theatrical performances and debate activities. It is the student's responsibility to give the instructor notice prior to any anticipated absences and within a reasonable amount of time after an unanticipated absence, ordinarily by the next scheduled class meeting. Instructors must allow each student who is absent for a University-approved reason the opportunity to make up work missed without any reduction in the student's final course grade as a direct result of such absence.*

## **Counseling and Psychological Services (CAPS) Center**

*Life as a university student can be challenging physically, mentally and emotionally. Students who find stress negatively affecting their ability to achieve academic or personal goals may wish to consider utilizing FAU's Counseling and Psychological Services (CAPS) Center. CAPS provides FAU students a range of services – individual counseling, support meetings, and psychiatric services, to name a few – offered to help improve and maintain emotional well-being. For more information, go to <http://www.fau.edu/counseling/>*

## **Disability Policy**

*In compliance with the Americans with Disabilities Act Amendments Act (ADAAA), students who require reasonable accommodations due to a disability to properly execute coursework must register with Student Accessibility Services (SAS) and follow all SAS procedures. SAS has offices across three of FAU's campuses – Boca Raton, Davie and Jupiter – however disability services are available for students on all campuses. For more information, please visit the SAS website at [www.fau.edu/sas/](http://www.fau.edu/sas/).*

## **Code of Academic Integrity**

*Students at Florida Atlantic University are expected to maintain the highest ethical standards. Academic dishonesty is considered a serious breach of these ethical standards, because it interferes with the university mission to provide a high-quality education in which no student enjoys an unfair advantage over any other. Academic dishonesty is also destructive of the university community, which is grounded in a system of mutual trust and places high value on personal integrity and individual responsibility. Harsh penalties are associated with academic dishonesty. For more information, see [University Regulation 4.001](#).*

## **Required Texts/Readings**

## **Tentative Topical Outline**

### **Week-by-Week Class Schedule:**

#### **Week 1: Syllabus Overview**

- Overview of the Syllabus and Course Expectations
- Introduction to Neurotissue Engineering
- Neuroanatomy and Neurophysiology

#### **Week 2: Neuroanatomy & Physiology**

- Anatomy & Physiology - Central & peripheral nervous tissue
- Histology - Cells & structures of nervous tissue (IHC, IF)
- Immunology – Immunology of CNS & PNS tissue

#### **Weeks 3: Electrophysiology & Neurogenetics**

- Electrophysiology - Bioelectricity and Neuromodulation
- Neurogenetics – Regional Differentiation
- Neurogenetics – Cell Metabolism

#### **Weeks 4: Principles of Nervous Tissue Engineering**

- Principles of tissue engineering
- Biomaterials for tissue regeneration
- Scaffold design and fabrication techniques

#### **Weeks 5: Neural Cell Culture Techniques**

- Cell-Based Approaches in Neural Repair
- Isolation and culture of primary neural cells
- Maintenance and characterization of neural cell cultures
- Differentiation of stem cells into neural lineages

#### **Weeks 6: Biomaterials for Neurotissue Engineering**

- Properties of biomaterials for neural regeneration
- Biomimetic approaches in neurotissue engineering
- Controlled release systems for neurotrophic factors

#### **Weeks 7: MIDTERM REVIEW & EXAM**

## **Weeks 8: CNS Damage & Endogenous Repair Mechanisms (part 1)**

- CNS Neural Regeneration and Plasticity
- Spinal cord injury repair
- Axon guidance and growth factor delivery

## **Weeks 9: PNS Nerve Damage & Endogenous Repair Mechanisms (part 2)**

- PNS Neural Regeneration and Plasticity
- Cardiovascular damage
- Pulmonary damage
- Musculoskeletal damage (sensory & motor)

## **Weeks 10: Stem Cells in Neurotissue Engineering**

- Introduction to stem cell biology
- Induced pluripotent stem cells (iPSCs)
- Stem cell-based therapies for neural repair

## **Weeks 13: Neuroelectronic Interfaces**

- Introduction to neuroprosthetics
- Brain-machine interfaces (BMIs)
- Electroactive biomaterials for neural interfaces

## **Week 14: Biomedical Devices & Interventions**

- Therapeutic Applications of Neurotissue Engineering
- Interventions for stroke, eye damage, hearing loss, PND
- Research and Development – Biosensors, translational models, cell therapies
- **IN-CLASS PRESENTATIONS**

## **Week 15: Emerging Trends and Ethical Considerations**

- Emerging technologies in neurotissue engineering
- Ethical issues in neural regeneration research
- Regulatory considerations and future directions
- **IN-CLASS PRESENTATIONS**

## **Week 15: FINAL REVIEW**

- **IN-CLASS PRESENTATIONS**

## **Week 16:**

- **FINAL EXAM**
- **IN-CLASS PRESENTATIONS**

**Subject:** Re: New BME course

This new course looks good to me. We can add it to our elective course list for the NGP doctoral program, once it is approved by the Faculty Senate. This is still in motion in the approval process.

I looked over the other courses on our elective list and this proposed BME course does not duplicate or conflict with any of those.

**Subject:** FW: New BME course

Hi Mahsa

Perhaps you copied over a message to Sarah Milton to have the course listed for the Integrative Biology Program? Regardless, the course looks terrific and to my knowledge not duplicative of the offerings we currently have for electives in the Neuroscience Graduate Program but I am forwarding this to Drs Guthrie and Godenschwege who can confer as to suitability for addition to the NGP syllabus

**Subject:** New BME course

Dear Dr. Milton,

The new BME department is developing a new course, Advanced Neuromechanics. Please see the attached information and let me know if you have any feedback about any other courses in neuroscience program impacted by this by Oct 21<sup>st</sup>. If we don't hear back from you, we assume there is no objections about this.

Best regards,  
Mahsa
