GENOMICS AND PREDICTIVE HEALTH GRADUATE CERTIFICATE

(Minimum of 12 credits required)

The Genomics and Predictive Health certificate is offered to provide master's and Ph.D. students an integrated background in the field of genomics and predictive health. The certificate program covers advancements in the field of personalized medicine, DNA sequencing technologies and commercial applications of genetic research. A minimum of 12 graduate credits of coursework is required to provide core experiences in the various predictive health domains (disease discovery, customized therapies and prevention). Although the program is centered within the Charles E. Schmidt College of Medicine, faculty from other FAU colleges and institutions contribute to the program's success, and students from many departments and colleges throughout the University are welcomed.

Genomics and predictive health is a broad, interdisciplinary field focused on understanding and improving human health. It incorporates diverse areas of specialized investigation that share this common goal including anatomy, biochemistry, cell biology, clinical sciences, cognitive sciences, development, genetics, immunology, medical sciences, microbiology, molecular biology, pathology, pharmacology, psychology and others.

Admission Requirements

Admission to and completion of this program is overseen by the Graduate Program Office in the Charles E. Schmidt College of Medicine. For admission, the applicant must satisfy the following criteria:

1. Must be enrolled in an FAU master's or Ph.D. program including, but not limited to, Biomedical Science, Biology, Biochemistry, Complex Systems and Brain Sciences, Integrative Biology, Psychology and Bioengineering. Students must have approval of their graduate program to enroll and must remain in good standing with their graduate program to continue in the certificate program;
2. Must meet with the Office of Graduate Programs' advisor to discuss program goals and requirements and obtain permission to enroll.

Program Requirements

The certificate program requires 12 credits that are designed to be tailored to the individual student with previous coursework and future goals in mind.

Required Courses (9 credits)

Human Genetics	PCB 6665
----------------	----------

Integrating Genomics into Predictive Health	PCB 6667
---	----------

<u>Multi-omic applications towards understanding health and disease</u> Graduate Seminars <u>PCB 6934</u> (1 credit per semester on a continuous basis for total of 3 credits)	<u>6933</u>
--	-------------

Complete ~~one~~ any of the ~~following~~ Graduate Biomedical Science elective courses (3 credits)

Emerging Applications in Oncology and Pharmacogenomics	PCB 6230
---	---------------------

Special Topics (Communicating in the Age of Predictive Health)	PCB 6933
---	---------------------

Special Topics (Implementing Learning Health Systems)	PCB 6933
--	---------------------
