Prefix SUR	(L = Lab Course; C = Combined Lecture/Lab;	Type of Course Course Titl	
Number 6387	add if appropriate) Lab Code	Lecture/Lab Thermal In	frared Remote Sensing
Credits (Review Provost Memorandum) 3 Effective Date (TERM & YEAR) Fall of 2019	Grading (Select One Option) Regular Sat/UnSat	Course Description (Syllabus must be attached; see Guidelines) Temperature is one of the most important physical variables. Temperature information with an appropriate spatial and temporal coverage is a key to addressing most of the environmental challenges on both local and regional scales. Measuring temperature remotely by thermal infrared is a new technology which has found a wide area of applications. In this course, students will learn the basic theory of sensors, data processing and analysis, and also investigate new applications of thermal infrared remote sensing on civil infrastructure and environmental systems monitoring.	
	GIS 4035C with minimum grade of "C" None None None		,
Prerequisites, Corequisites and Registration Controls are enforced for all sections of course			
Minimum qualifications needed to teach course: Member of the FAU graduate faculty and has a terminal degree in the subject area (or a closely related field.)		List textbook information in syllabus or here Thermal Infrared Remote Sensing Sensors, Method, Applications Claudia Kuenzer and StefanDech Springer; 2013 ISBN 978-94-007-6639-6	
Faculty Contact/Email/Phone		List/Attach comments from departments affected by new course

Email this form and syllabus to UGPC@fau.edu one week before the UGPC meeting.

1. Course title/number, numb	er of credit hours			
Thermal Infrared Remote Sensing and Applications (SUR 6387)		3 credit hours		
2. Course prerequisites, corequisites, and where the course fits in the program of study				
Prerequisite: 1 GIS 4035C with minimum grade of "C" or Special permission from the instructor				
3. Course logistics				
Term: Fall 2019 This is a live, on-line course w Class location and time Class time: Tuesday, 7:00 —10 Office Hour: Tuesday 9am-12	:00 PM	ons for laboratory demonstration		
4. Instructor contact informat	ion			
Instructor's name Office address Office Hours Contact telephone number Email address 5. TA contact information	Dr. Hongbo Su. Building: 36, Room: Boca Raton, FL Phone: (561) 297 39 E-mail: suh@fau.ed	36		
TA's name Office address Office Hours Contact telephone number Email address	N/A			
6. Course description				
Temperature is one of the most important physical variables. Temperature information with an appropriate spatial and temporal coverage is a key to addressing most of the environmental challenges on both local and regional scales. Measuring temperature remotely by thermal infrared is a new technology which has found a wide area of applications. In this course, students will learn the basic theory of sensors, data processing and analysis, and also investigate new applications of thermal infrared remote sensing on civil infrastructure and environmental systems monitoring. 7. Course objectives/student learning outcomes/program outcomes				
The second secon	Non-timed of Communication	New York Control of March		
Course objectives	of thermal infrared thermographic cam- processing of the t thermal infrared re environmental mod	rstanding of the advanced theoretical background remote sensing and the geometrical calibration of eras; To operate the thermal camera and do image hermal infrared images; To learn and design the emote sensing systems and their applications in nitoring such as detection of energy leaks in at island effects, industrial related thermal water		

Student learning outcomes & relationship to ABET a-k objectives	1. Graduate course	e, not relevant
8. Course evaluation method		
Course attendance: Assignments: Midterm - Final Examination -	5% 35% 20% 40%	Note: The minimum grade required to pass the course is C.

Course grading scale

Grading Scale:

90 and above: "A", 87-89: "A-", 83-86: "B+", 80-82: "B", 77-79: "B-", 73-76: "C+", 70-72: "C", 67-69: "C-", 63-66: "D+", 60-62: "D", 51-59: "D-", 50 and below: "F."

10. Policy on makeup tests, late work, and incompletes

Makeup tests are given only if there is solid evidence of a medical or otherwise serious emergency that prevented the student of participating in the exam. Makeup exam should be administered and proctored by department personnel unless there are other pre-approved arrangements.

Incomplete grades are against the policy of the department. Unless there is solid evidence of medical or otherwise serious emergency situation incomplete grades will not be given.

11. Special course requirements

All assigned homework must be submitted on or before the posted time. Per day 10% penalty will be enforced for late submissions.

To succeed in this course all exams must be taken. The reasons for missing an exam must be documented, i.e. doctor's note etc. An unsatisfactory excuse will result in an F entered for that exam. Make-up exams will be administered for ONLY valid reasons.

All exams will be taken on the honor system and must be done by the student ONLY with NO ASSISTANCE FROM ANYONE. A student MAY NOT provide assistance to another student.

You are encouraged to work in groups to complete the homework assignments and/or to study together. However, the completed homework assignments must be your own work.

12. Classroom etiquette policy

University policy requires that in order to enhance and maintain a productive atmosphere for education, personal communication devices, such as cellular phones and laptops, are to be disabled in class sessions.

13. Attendance Policy Statement

Students are expected to attend all of their scheduled University classes and to satisfy all academic objectives as outlined by the instructor. The effect of absences upon grades is determined by the instructor, and the University reserves the right to deal at any time with individual cases of non-attendance. Students are responsible for arranging to make up work missed because of legitimate class absence, such as illness,

family emergencies, military obligation, court-imposed legal obligations or participation in University-approved activities. Examples of University-approved reasons for absences include participating on an athletic or scholastic team, musical and theatrical performances and debate activities. It is the student's responsibility to give the instructor notice prior to any anticipated absences and within a reasonable amount of time after an unanticipated absence, ordinarily by the next scheduled class meeting. Instructors must allow each student who is absent for a University-approved reason the opportunity to make up work missed without any reduction in the student's final course grade as a direct result of such absence.

14. Disability Policy Statement

In compliance with the Americans with Disabilities Act Amendments Act(ADAAA), students who require reasonable accommodations due to a disability to properly execute coursework must register with Student Accessibility Services (SAS) and follow all SAS procedures. SAS has offices across three of FAU's campuses – Boca Raton, Davie and Jupiter – however disability services are available for students on all campuses. For more information, please visit the SAS website at www.fau.edu/sas/.

15. Counseling and Psychological Services (CAPS) Center

Life as a university student can be challenging physically, mentally and emotionally. Students who find stress negatively affecting their ability to achieve academic or personal goals may wish to consider utilizing FAU's Counseling and Psychological Services (CAPS) Center. CAPS provides FAU students a range of services – individual counseling, support meetings, and psychiatric services, to name a few – offered to help improve and maintain emotional well-being. For more information, go to http://www.fau.edu/counseling/

16. Code of Academic Integrity Policy Statement

Students at Florida Atlantic University are expected to maintain the highest ethical standards. Academic dishonesty is considered a serious breach of these ethical standards, because it interferes with the university mission to provide a high-quality education in which no student enjoys an unfair advantage over any other. Academic dishonesty is also destructive of the university community, which is grounded in a system of mutual trust and places high value on personal integrity and individual responsibility. Harsh penalties are associated with academic dishonesty. For more information, see University Regulation 4.001. If your college has particular policies relating to cheating and plagiarism, state so here or provide a link to the full policy—but be sure the college policy does not conflict with the University Regulation.

17. Required texts/reading

Thermal Infrared Remote Sensing Sensors, Method, Applications Claudia Kuenzer and StefanDech

Springer; 2013 Language: English ISBN 978-94-007-6639-6

18. Supplementary/recommended readings

Journal papers distributed in the class

19. Course topical outline, including dates for exams/quizzes, papers, completion of reading

Week 1: Theoretical background of Thermal Infrared Remote Sensing

Week 2: Geometric Calibration of Thermographic Cameras with lab demonstration

Week 3: Thermal Infrared Spectroscopy in the Laboratory and Field, assignments due

Week 4: Challenges and Opportunities for UAV-Borne Thermal Imaging with lab demonstration

Week 5: Spaceborne Thermal Infrared Observation, assignments due

Week 6: NASA's Hyperspectral Infrared Imager (HyspIRI)

Week 7: Thermal Remote Sensing of Sea Surface Temperature, mid-term exam

Week 8: Application of the Apparent Thermal Inertia Concept for Soil Moisture Estimation

Week 9: Thermal Infrared Remote Sensing of Surface and Underground Coal Fires

Week 10: Thermal Infrared Remote Sensing of Geothermal Systems

Week 11: Analysis of Surface Thermal Patterns in Relation to Urban Structure Types, assignments due

Week 12: Thermal Remote Sensing of Active Vegetation Fires and Biomass Burning Events

Week 13: Validation of Thermal Infrared Emissivity Spectra Using Pseudo-Invariant Sand Dune Sites

Week 14: Class project on applications of thermal infrared remote sensing

Week 15: Course review, final exam
