

Accessing Store Setup

Accessing Store Setup: Customize Store

Once the framework of the eMarket site has been configured, you can proceed to using the Store Setup wizard to complete and customize your store.

Note: While the store framework will rarely change beyond initial implementation, Store Setup can change frequently.

You can use **Store Setup** to make user interface changes to your store, add new payment methods, update text displayed on the screen, and more.

Accessing Store Setup: Customize Store

To access **Store Setup**, log in to the Transact Payments Administration site and click **Store Setup** in the left navigation pane.
