

Windows 8.1 Connecting to FAU's New Secure Wireless Network

This secure network, "fauwpa2", allows faculty and staff to access Banner via wireless devices.

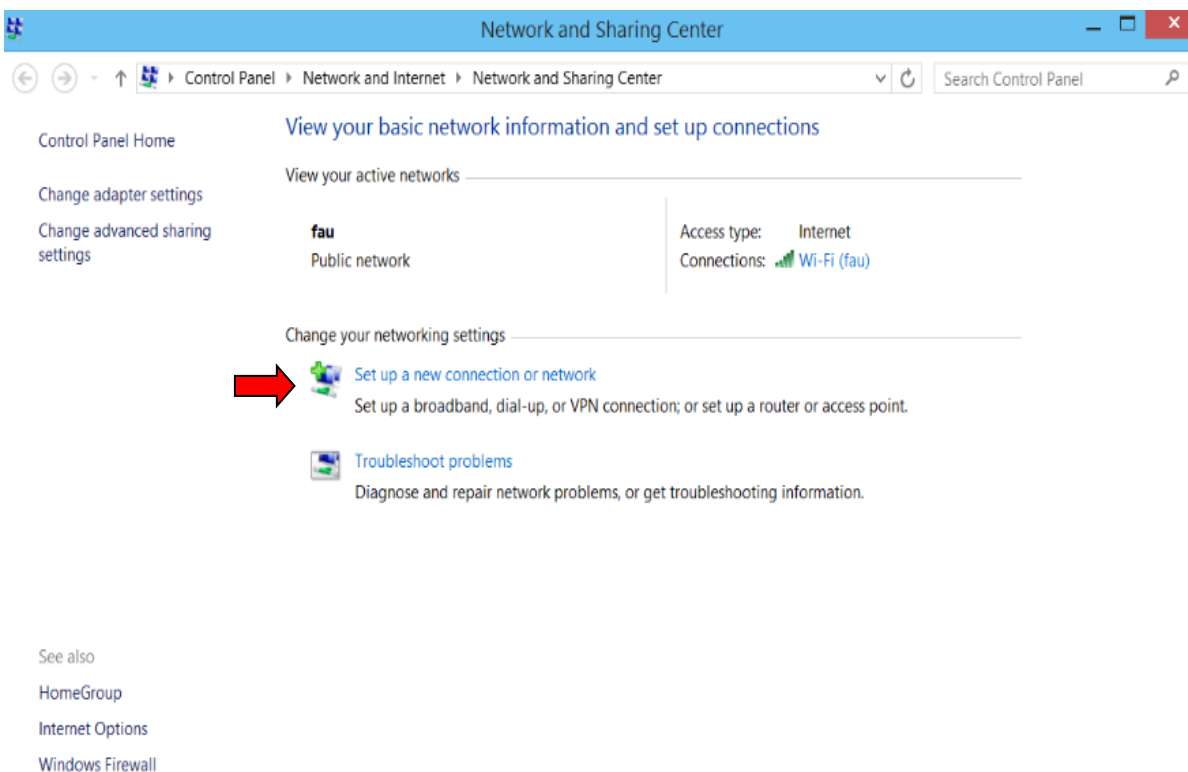

Please note If you have already tried to connect to FAUWPA2 and were unsuccessful, you will need to remove the wireless profile **before** you follow the steps below. To remove the wireless profile, refer to these steps under the task "Delete a profile": <http://windows.microsoft.com/en-us/windows-8/manage-wireless-network-profiles>.

Connecting to the new FAU's Secure Wireless Network

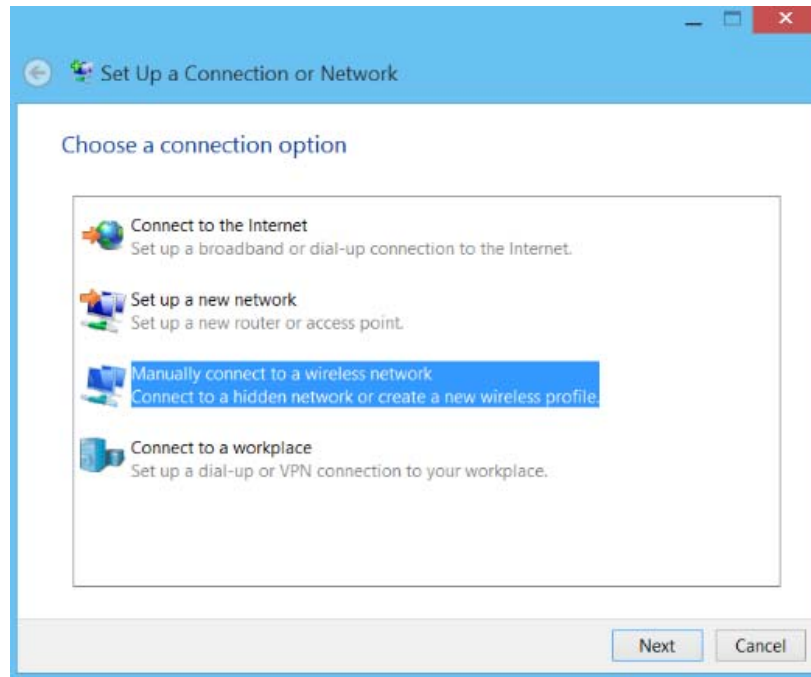

1. Click on the icon that represents your wireless network and select "Open Network and Sharing Center".

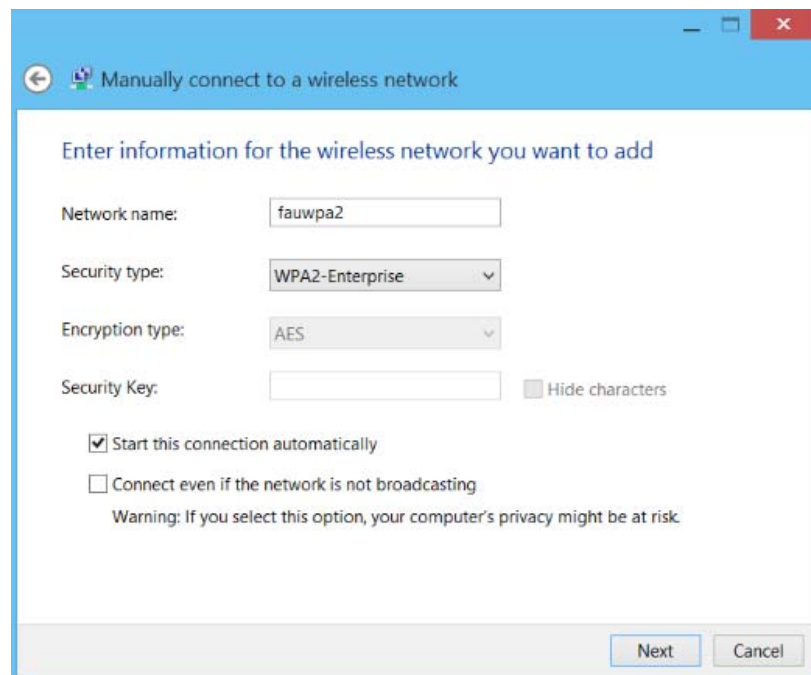

2. The "Network and Sharing Center" should have opened. In the middle of the window, click on "Setup a new connection or network".

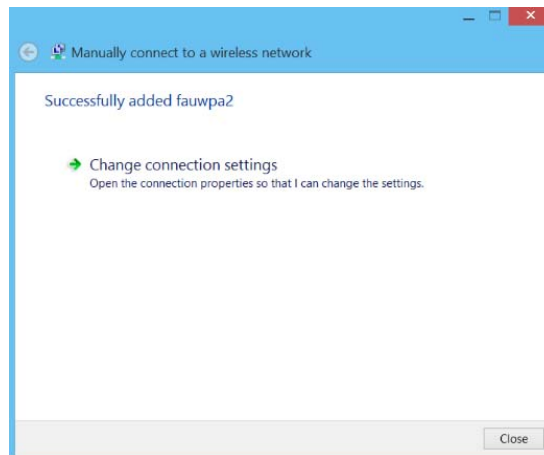

3. Click on "Manually connect to a wireless network"

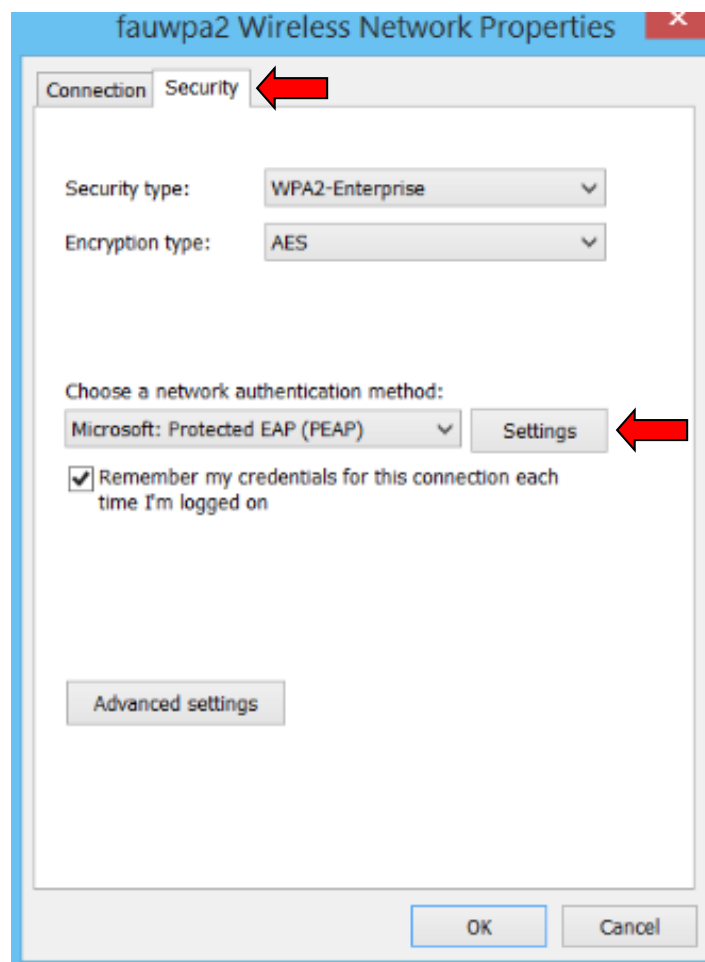

4. Add the information as you see below (Network Name, Security Type and Encryption Key) then click Next.

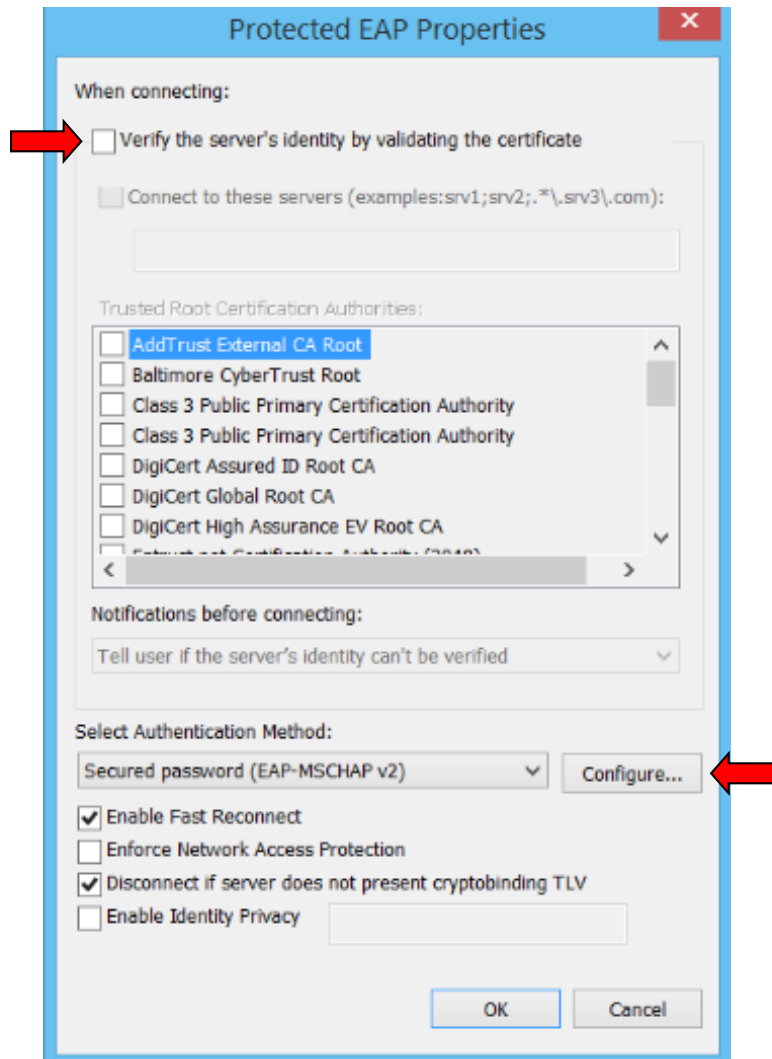

5. Click "Change connection settings".

6. Click on the "Security" tab near the top and click the "Settings" button next to "Microsoft: Protected EAP (PEAP)"

7. Remove the check in the box to the left of "Validate server certificate". Then, press the "Configure" button next to "Secured password (EAP-MSCHAP v2)".

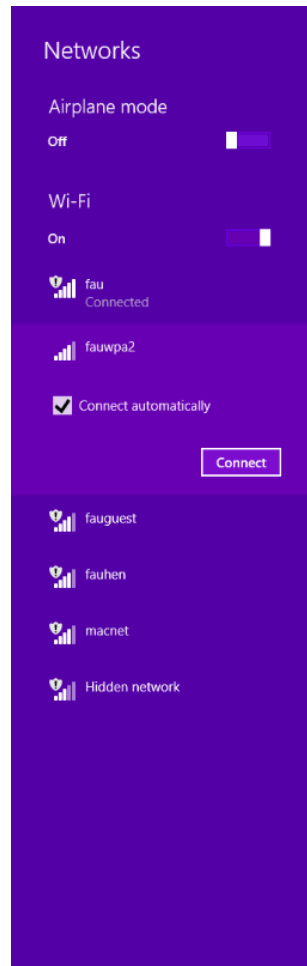

8. A smaller box will pop up. Uncheck "Automatically use my Windows logon name and password (and domain if any)". Then click the "OK" button.

9. Left Click on the icon that represents your wireless network

10. Select fauwp2 and click "Connect".

11. After clicking on the “Connect”, you will need to enter your FAUNet Id and password.

12. You are now connected to fauwp2 and you may begin to browse.
