

# Why is There an Error in the Page Structure?

Ticket Reference **17670965**

A user explains they cannot edit in the WYSIWYG editor because there is an error stating that there an error in the page structure and JustEdit could not open.

This is due to an empty tag, putting **&nbsp;** will fix this issue.

To find the empty tag you must go to the source code and find it manually.

OR

If the page was functioning before, look at the previous version history and compare the code and find the empty tag.
