Alzheimer’s disease and related disorders, as well as Parkinson’s disease, affect millions of people and cost the U.S. trillions of dollars. These numbers are projected to increase.

In this talk, Behnaz Ghoraani, Ph.D., will discuss how artificial intelligence (AI) and other technologies can provide improved health care to treat and detect these disorders.

Ghoraani will address:

- Technology-based assessment tools to detect early-stage Alzheimer’s disease community programs
- Novel engineering solutions to address the need for individualized therapeutic approaches in Parkinson’s disease, including wearable sensors
- Research that can lead to improved quality of life for patients

Behnaz Ghoraani, Ph.D., associate professor in the College of Engineering and Computer Science
