Can Focused Ultrasound Change the Pain Game?

Presented by Julie Pilitsis, MD, Ph.D., MBA, dean and vice president for medical affairs
Charles E. Schmidt College of Medicine

1 – 2 P.M. EST
THURSDAY, SEPT. 22

Chronic pain affects millions of Americans every day. But a new noninvasive neurosurgical technology, called focused ultrasound (FUS), can treat several diseases and disorders that cause pain.

Join Julie Pilitsis, MD, Ph.D., MBA, as she discusses new uses of FUS in neurosurgical applications, such as a non-invasive treatment for chronic pain.

Learn about how FUS works, including:

- Current ablation applicators and techniques
- Various indications of FUS
- Benefits of FUS for pain compared to other treatment options
