Shifting the fear of sea level rise into an advantage, Miami could position itself to create a new mode of transportation by turning water-covered roads into canals. South Florida architects are looking to construct developments in sustainable and environmentally-conscious solutions.

Join Jeffery Huber as he explains South Florida’s current construction and potential adaptations to sea-level rise.

Reconstructing Miami’s Salty Skyline

Presented by Jeffrey Huber, Associate Professor, School of Architecture, Dorothy F. Schmidt College of Arts and Letters

1 – 2 p.m. EST
Thursday, Sept. 2
