In the 21st century, urban areas will need to adapt to a changing climate and simultaneously act to significantly decrease greenhouse gas emissions. ***Adaptation Urbanism and Resilient Communities***, a book by Billy Fields and John L. Renne to be released on May 4, 2021, outlines adaptation urbanism as a theoretical framework to evaluate resilience projects and policy. Detailed case studies uncover the promise and tensions of resilient communities in Europe (Copenhagen, Rotterdam, and London), and the United States (New Orleans and South Florida). Best practice projects in Amsterdam, Barcelona, Delft, Utrecht, and Vancouver are examined. **[Join the webinar and receive a 20% discount code for the book | PDF preview](#)**
