Subject: Re: COP1034C Computer Programming and Data Literacy for Everyone

Hi Rainer. Thank you. I will make this change. I can confirm we do not intend on trying to make this a Gordon Rule class. Fred

Dear Fred,

To address concerns about *COP1034C Computer Programming and Data Literacy for Everyone*, I think it would be a welcome gesture if in the syllabus in Item 2 in the "Student learning outcomes & relationship to University missions" section the two words "mathematical and" could be dropped.

The proposed course would for us not be acceptable as a Gordon Rule course, and from our conversation I understand that your College does not intend to elevate this course to meet the Gordon Rule requirement. With this understanding, I would see no problem from the math side in this course moving forward.

Thanks,  
Rainer
